Lt. Joyce Riba (Ret) Fresno Police Department, Fresno, CA

The IAPE Board of Directors is charged with the duties of advancing the scope of knowledge and enhancing professionalism within the field of property and evidence management. To help achieve this goal, the IAPE has adopted professional standards in a number of important property and evidence handling procedures.

Adhering to these standards should assure any agency that reasonable steps have been taken to obtain a secure and efficient property and evidence management system. Not adhering to these recommended standards will increase the likelihood of problems associated with the operation of the unit.

IAPE STANDARDS

Table of Contents:

SECTION A – PROPERTY ROOM GLOSSARY

SECTION 1 – STAFFING

- Standard 1.1 Staffing – Job Classification
- Standard 1.2 Staffing – Background Checks
- Standard 1.3 Staffing – Adequate Number of Personnel
- Standard 1.4 Staffing – Rotation of Personnel
- Standard 1.5 Staffing – Hours of Operation / Scheduling
- Standard 1.6 Staffing – Responsibilities of the Property Officer
- Standard 1.7 Staffing – Promotional Opportunities
- Standard 1.8 Staffing – Training
- Standard 1.9 Staffing – Professional Associations
- Standard 1.10 Staffing – Organizational Placement

SECTION 2 – POLICIES / PROCEDURES

- Standard 2.1 Policies/Procedures – Written Directives

SECTION 3 – PACKAGING

- Standard 3.1 Packaging Requirements

SECTION 4 – DOCUMENTATION

- Standard 4.1 Documentation – Property Report
- Standard 4.2 Documentation – Computerization
- Standard 4.3 Documentation – Forms
- Standard 4.4 Documentation – External Movement

SECTION 5 – STORAGE FACILITIES

- Standard 5.1 Storage Facilities – Construction
- Standard 5.2 Storage Facilities – Layout
- Standard 5.3 Storage Facilities – Storage Schemes
- Standard 5.4 Storage Facilities – Safety/Environment

SECTION 6 – TEMPORARY STORAGE FACILITIES

- Standard 6.1 Storage Facilities – Temporary

SECTION 7 – LONG TERM STORAGE LOCATIONS

- Standard 7.1 Storage Locations – Long Term
- Standard 7.2 Storage Locations – Evidence
- Standard 7.3 Storage Locations – Found Property
- Standard 7.4 Storage Locations – Property for Safekeeping

SECTION 8 – SECURITY

- Standard 8.1 Security – Policy
- Standard 8.2 Security – Access
- Standard 8.3 Security – Access Logs
- Standard 8.4 Security – After Hours Access
- Standard 8.5 Security – Key Control/Electronic Access Control
- Standard 8.6 Security – Lock Changes
- Standard 8.7 Security – Alarms
- Standard 8.8 Security – Duress Alarms
- Standard 8.9 Security – Video Surveillance

SECTION 9 – DRUGS

- Standard 9.1 Drugs – Packaging
- Standard 9.2 Drugs – Documentation
- Standard 9.3 Drugs – Documentation of Movement
- Standard 9.4 Drugs – Storage
- Standard 9.5 Drugs – Ventilation
- Standard 9.6 Drugs – Storage Pending Destruction
- Standard 9.7 Drugs – Destruction Documentation
- Standard 9.8 Drugs – Destruction Method
- Standard 9.9 Drugs – Drugs for Destruction Audit

SECTION 10 – MONEY

- Standard 10.1 Money – Packaging
- Standard 10.2 Money – Documentation
- Standard 10.3 Money – Documentation of Movement
- Standard 10.4 Money – Storage
- Standard 10.5 Money – Storage Pending Transfer
- Standard 10.6 Money – Disposition Release
- Standard 10.7 Money – Disposition Transfer to Finance
- Standard 10.8 Money – Disposition Asset Forfeiture

SECTION 11 – FIREARMS

- Standard 11.1 Firearms – Packaging
- Standard 11.2 Firearms – Documentation
- Standard 11.3 Firearms – Documentation of Movement
- Standard 11.4 Firearms – Storage
- Standard 11.5 Firearms – Storage Pending Destruction
- Standard 11.6 Firearms – Disposition/Release
- Standard 11.7 Firearms – Disposition/Diversion to Agency Use
- Standard 11.8 Firearms – Disposition/Sale-Trade
- Standard 11.9 Firearms – Disposition/Destruction Documentation
- Standard 11.10 Firearms – Destruction Method

SECTION 12– FOUND PROPERTY

- Standard 12.1 Found Property – Reporting Policy
- Standard 12.2 Found Property - Receipt
- Standard 12.3 Found Property - Storage
- Standard 12.4 Found Property - Investigation
- Standard 12.5 Found Property - Release
- Standard 12.6 Found Property - Disposition

SECTION 13 – PROPERTY FOR SAFEKEEPING

- Standard 13.1 Property for Safekeeping - Reporting Policy
- Standard 13.2 Property for Safekeeping - Receipt
- Standard 13.3 Property for Safekeeping - Storage
- Standard 13.4 Property for Safekeeping - Disposition

SECTION 14 – DISPOSITION

- Standard 14.1 Disposition – Purge Review
- Standard 14.2 Disposition – Authority to Purge
- Standard 14.3 Disposition – Release to Owner
- Standard 14.4 Disposition – Auctions
- Standard 14.5 Disposition – Diversion
- Standard 14.6 Disposition – Destruction

SECTION 15 – INTERNAL CONTROLS

- Standard 15.1 Inventories
- Standard 15.2 Audits
- Standard 15.3 Other Internal Controls

SECTION 16 – DIGITAL EVIDENCE MANAGEMENT

- Standard 16.1 Digital Evidence
- Standard 16.2 Digital Evidence Preservation
- Standard 16.3 Digital Evidence Security
- Standard 16.4 Digital Evidence Infrastructure

IAPE STANDARDS

SECTION A: PROPERTY ROOM GLOSSARY

- **ADJACENCIES** are two or more work areas that are related to one another and can benefit from being physically close to each other, hence adjacent.
- **CHAIN OF CUSTODY** refers to the chronological documentation of the seizure, custody, control, transfer (temporary or permanent), and disposition of evidence, either physical or electronic.
- **CHIEF EXECUTIVE OFFICER (CEO)** is the head of a law enforcement agency and includes, but is not limited to the Chief of Police, Sheriff, Director of Public Safety, Agent in Charge, and Commissioner.
- **CONTROL NUMBER** is the sequential, ordinal, consecutive, or chronological number that items of property or evidence are filed by in the property room. This may include case numbers, property record numbers, or barcode numbers.
- **CONTROLLED ROOM TEMPERATURE ENVIRONMENT** is a storage environment that limits temperature variation from 60° to 75° F and a relative humidity not to exceed 60%.
- **CONVENIENCE CONTAINER** is a uniform size box, bag, or envelope that contains several smaller size items from one case and groups them together for ease of storage and retrieval.
- **DIGITAL INFORMATION** Digital information is any type of electronic file containing text, data, signal, image, video, or voice recording stored on magnetic, optical, or flash media.
- **DIGITAL EVIDENCE** refers to digital information that has probative value in either tending to prove or disprove a material fact in a criminal or civil case.
- **DIVERTED PROPERTY or DIVERSION** is the process by which the ownership of abandoned, forfeited, or unclaimed property is legally transferred to a public agency for public use.
- **DROP DEAD DATE** is a time restriction that requires action to be taken prior to a specified date.
- **EVIDENCE** refers to material that has probative value in either tending to prove or disprove a material fact in a criminal or civil case.
- **FOUND PROPERTY** is non-evidentiary property, which, after coming into the custody of a law enforcement agency, has been determined to be lost or abandoned and is not known or suspected to be connected with any criminal offense
- **GENERAL ORDER** is a directive published by a commander that is binding upon all personnel under his command, the purpose of which is to enforce a policy or procedure unique to his unit's situation that is not otherwise addressed. A general order is issued to every employee, and not explicitly issued to any one person, as a direct order would be.
- **KEY-HOLDING PERSONNEL** refers to a person(s) who has a key or who has unescorted access into the property room storage area.

- **PROPERTY** refers to the generic term for personal property that does not have evidentiary value and comes into the possession of a law enforcement agency as found, safekeeping, or property for destruction.
- **PROPERTY ROOM** – the generic term for the location where property and evidence is stored, which also may include secondary storage and office areas.
- **PROPERTY OFFICER** is the generic term for the person who is assigned to the property room and is charged with the responsibility for documenting, storing, retrieving, and disposing of property and evidence.
- **PROPERTY FOR SAFEKEEPING** is non-evidentiary property that is placed in the custody of a law enforcement agency for temporary protection on behalf of the owner
- **PROPERTY REPORT** is the generic term for the form or computer printout that documents the case number, control number, item number, and item description.
- **PROPERTY UNIT** is a generic term for the intangible organizational unit within the law enforcement agency that is charged with maintaining property and evidence. This includes the chain of command consisting of the supervisor, manager, and the commander.
- **PURGE REVIEW** is a systematic process assuring that each item of property and evidence is evaluated for possible purging at least on a yearly basis.
- **RIGHT OF REFUSAL** is the authority given to the property officer to reject and notify the booking officer that property or evidence is improperly packaged or documented, and needs correction.
- **RULE OF TWO** is a principle where two persons are present anytime that a witness is necessary to provide testimony, if necessary.
- **SHARPS** is a term applied to hypodermic needles, disposable scalpels, and other sharp edged implements used in medical care subject to universal precautions
- **STANDARD OPERATING PROCEDURE (SOP)** is a set of instructions having the force of a directive, covering those features of operations that lend themselves to a definite or standardized procedure without loss of effectiveness.
- **STANDING OPERATING PROCEDURE (SOP)** is an order or procedure that it is in effect until further notice, at which time it may be amended or dissolved.
- **STATUTE OF LIMITATION** is the legally defined period of time in which a criminal or civil action may be initiated. Once the statute of limitation has expired, a case may no longer be filed.
- **THRESHOLD** is a predetermined quantity of items or elapsed time that triggers an action, such as a transfer of money, or destruction of firearms or drugs.
- **TICKLER FILES** are a method of reminding the user of where and when an item is placed in a temporary location, and can be structured to remind, or tickle, the user when a certain period of time has elapsed.

IAPE STANDARDS SECTION 1 - STAFFING

Standard 1.1: Staffing - Job Classification

Standard: Property unit personnel should have a job classification title that matches the duties and responsibilities performed by that person. This may be a sworn or civilian position.

Definition: Job classification refers to the name or title of the position that performs the property officer's duties.

Reasoning: Peace officer powers are generally not required to perform the property officer duties of receiving, storing, and disposing of property and evidence. The same applies to supervisors or managers of the property and evidence room. Using civilians generally lowers the cost to perform the duties; however, using a sworn position may permit retaining sworn personnel with permanent disabilities that don't impact their ability to perform the property officer's duties.

Standard 1.2: Staffing – Background Checks

Standard: Personnel should undergo a thorough background check prior to assignment to a position inside the property unit.

Definition: A background check is verification of information submitted by the applicant to determine an applicant's qualifications and suitability for a particular position. A thorough background check should include criminal history check, sex offender registries, prohibited weapons possession status, drug testing, financial disclosure and a polygraph exam (if permitted by local laws and collective bargaining agreement, if one exists).

Reasoning: It is important that the agency's selection criteria produce qualified employees. Assigning a person with a past or present drug problem to handle drugs, or with financial difficulties to handle money will greatly increase the possibility of theft or mishandling, and may also jeopardize the integrity of the evidence system.

The same reasoning applies to background checks for any employee transferring from another assignment within the agency, or another department within the umbrella organization, even if they have undergone a pre-employment background check.

Standard 1.3: Staffing – Adequate Number of Personnel

Standard: The number of personnel assigned to the property unit should be adequate to perform the assigned duties in the property room within the hours they are scheduled to work.

Definition: The adequate number of personnel needed to staff the evidence function is determined by the total number of labor-hours needed to perform all daily duties and responsibilities required by the unit. These daily duties should also include “other ancillary duties” that require time to be spent outside the property room.

Reasoning: There is no one formula that can be used to determine the ideal number of employees needed in the property room. Such considerations as the size of the agency; the hours/days of operation, the operating procedures of the department, etc. must be considered when determined the required staffing levels. The duties and responsibilities of the property officer should be completed in the daily work hours by the number of personnel assigned to the property room.

Additionally, in order to assess staffing needs, the property officer should maintain statistical data that can be used to evaluate workload, property room inventory levels, etc.

Standard 1.4: Staffing – Rotation of Personnel

Standard: Rotation of personnel into and out of the property room should be avoided.

Definition: Rotation of personnel refers to the routine or scheduled transferring of personnel in and out of the property unit assignment.

Reasoning: Rotating personnel through the property unit should be discouraged, as it makes quality control more difficult and additional security measures need to be taken each time that a “key-holding” employee leaves the assignment.

When an agency routinely rotates personnel through the property unit assignment, it generates a “lack of ownership” in the operation. When “ownership” is present, it generally tends to form personal motivation and collective interest, professionalism, and pride.

Standard 1.5: Staffing – Hours of Operation / Scheduling

Standard: The property room employee’s work schedules and public counter schedules should be established based upon public access, peak workload hours or demands, and the need for uninterrupted time to accomplish internal tasks, e.g. purging and disposition.

Definitions: “Hours of Operation” is the scheduled time allotted for the routine transaction of business to occur in the property room.

“Scheduling” is the specific hours assigned to individual employees during the time the property room is open for business.

Reasoning: Accessibility by the public should be considered when determining scheduling. Whenever practical, the property room should be open during regular business hours, as defined by the agency. Some agencies may choose to release property/evidence by appointment only. Consideration may also be given to the possibility of allocating specific time when the property room is not open to the public to be set aside for the performance of specific tasks such as the processing and disposing of evidence. Additionally, an agency may want to consider opening one evening a week, a month, etc. so that citizens can come in to conduct business after regular work hours.

Standard 1.6: Staffing – Responsibilities of the Property Officer

Standard: The major responsibilities of a property officer are to receive all incoming property/evidence, to fully document it, to store it systematically, to preserve its condition, to maintain it securely, to lawfully release or dispose of it, and to maintain a complete chain of custody of the entire process that is sufficiently accurate and complete to satisfy any court requirements.

Definition: The designated tasks and duties of individual property officers assigned to the property unit.

Reasoning: Responsibilities for tasks and duties performed by a property officer are to:

- ensure that incoming property/evidence is packaged in accordance with agency guidelines
- preserve all incoming property/evidence from contamination, theft, or loss
- maintain and update documentation with tracking information, commonly known as the “chain of custody”
- enter necessary data into the property unit tracking system (automated or manual systems)

- ensure that all releases and dispositions of property/evidence are legal and accurately documented
- arrange and document interim releases and returns of evidence for court, crime lab analysis, or investigative use
- operate property management software and information systems, as needed
- prepare and forward property-related forms to requesting units and agencies
- serve as the liaison for property and evidence matters between the agency and other local, state, and federal law enforcement agencies
- maintain current knowledge of federal, state, and local laws related to property/evidence management
- provide for maintenance of the storage facility
- inventory property/evidence based on the policy demands of the agency
- ensure that all efforts are taken to make the property unit as safe as possible for employees as well as property/evidence
- store property/evidence in the designated storage area
- limit access to the Property Room to only authorized individual(s) and maintain access logs
- ensure that there is adequate security for the Property Room

Standard 1.7: Staffing – Promotional Opportunities

Standard: Advancement opportunities for civilian employees within the property unit/agency to the position of lead person, supervisor, or manager should be given to those that pass an established testing and selection process pertaining to the property and evidence function as well as supervision/leadership.

Definition: Promotional opportunity refers to the ability of property unit personnel to advance in career positions within the law enforcement unit/agency.

Reasoning: Advancement for civilian employees within the agency is important as a means to retain the best qualified personnel, and attract those that are interested in the property and evidence management as a career. Sworn supervisors and managers are generally not interested in an assignment working in a warehouse environment.

Career ladders should be established by designating the property unit supervisor and manager to be civilian positions in the law enforcement agency. The selection of the best-qualified person to become a property officer in an agency may be hampered if it is viewed upon as a “career dead end” with no obvious promotional opportunities.

Standard 1.8: Staffing – Training

Standard: Training should be provided to all property officers, supervisors and managers of the property unit. The training should be applicable to the duties and responsibilities of the property officer and should be provided by professional instructors in the field of property and evidence management.

Definition: Appropriate training involves receiving knowledge and enhancing skills in the field of property and evidence management.

Reasoning: Experts in the field of property and evidence recommend that all property officers, supervisors, and managers should be required to attend a property and evidence Management class. The two-day Property and Evidence Management classes provided by the International Association for Property and Evidence, Inc. (IAPE) for example, gives experienced personnel an insight into different ways of accomplishing the required duties. Additionally the training should provide new staff and supervisors a very detailed look at best practices, as well as issues and problems that will be encountered in the assignment.

Training should be timely, continual, and well documented. While attending training prior to beginning an assignment as a property officer is preferred, personnel should, if possible, attend the basic training previously described above within the first year in the assignment. Safety training should include hazardous materials, biohazards, blood-borne pathogens, and a basic firearm orientation on how to safely handle firearms. Training records should be accurately maintained.

Training should always include familiarization and on-going product support and upgrades for whatever software package is in use for the management of the inventory.

Familiarization with the evidence function should also be provided for new hires and especially for newly promoted detectives and investigators illustrating the need for timely authorization to dispose of unneeded items whenever possible.

Standard 1.9: Staffing – Professional Associations

Standard: Property unit personnel should make every attempt to familiarize themselves, and become involved, in professional associations that can provide training and develop additional skills in the field of property and evidence management.

Definition: Professional Associations are organizations that are made up of persons dedicated to providing training, expanding skills and increasing knowledge of property unit personnel.

Reasoning: Involvement in professional associations, such as IAPE, the American Society of Crime Laboratory Directors (ASCLD) and state, regional, or local property associations for networking and training updates is strongly encouraged. These associations can assist law enforcement agencies with the organization and the training of property unit personnel, as well as provide valuable resources to assist with solutions as potential problems arise.

Standard 1.10: Staffing – Organizational Placement

Standard: To prevent a perceived conflict of interest, as it pertains to the disposition of property or evidence, the property unit should be placed organizationally in a neutral arena, such as a Services or Administration Division. The property officer should be the guardian of the property, not the collector of evidence or the decision maker regarding the disposition of property or evidence.

An exception is necessary for smaller agencies that may not have an Administration or Services Division.

Definition: Organizational Placement refers to the authority lines and reporting relationships affecting the property unit.

Reasoning: Law enforcement agencies recognize the fact that managers hold some elements of formal and informal control over the supervisors reporting to them. The supervisors, in turn, have the same influences over their subordinates. The property unit's organizational placement can greatly impact its independence and credibility.

The property unit should be organizationally separate from patrol and investigation functions. Patrol personnel seize and book most property/evidence, and investigating officers are generally responsible for the authorization to dispose of property or evidence.

Placing the property unit in a neutral arena between those two functions enhances accountability. The responsibility of the property unit personnel is to maintain custody and documentation, not to be involved in the collection or decision-making. If possible, the property unit should be organizationally placed in an Administrative or Support Services Division.

It is common practice for the property officer to make the final disposition of Found Property and Safekeeping items (excluding firearms) that by definition has no evidentiary value, but such authority should not extend to the disposition of items held as evidence.

A property officer may not be aware of the potential relationship of a piece of evidence to other criminal investigations. Therefore, the assigned investigator or officer should approve the final disposition. However, if an agency authorizes the Property Officer to make the decision regarding final disposition, that authorization should be memorialized in written policy.

IAPE STANDARDS SECTION 2 - POLICIES AND PROCEDURES

Standard 2.1: Policies and Procedures – Written Directives

Standard: The submission, handling, storage, and disposition of property and evidence needs to be documented in written policies and procedures.

Definition: Written directives are policies or guidelines placed in written guidelines to provide direction and understanding of responsibilities, duties and tasks.

Reasoning: In order to clarify and standardize the procedures for the submission, documentation, packaging, storage, movement, security, purging and disposition of property/evidence, it is imperative that directives be used to guide the operation of an agency's property and evidence handling. These directives should clearly define the duties and responsibilities of any agency employee who takes part in the seizing, handling, storage, or disposition of property/evidence, and these directives should be regularly updated to reflect legal and policy changes. It is also important that such orders and directives be disseminated in a systematic manner to those persons who will be held accountable by these policies and/or procedures.

General Orders/SOPs: It is critical that a law enforcement agency's property and evidence General Orders (G.O.s) and Standard Operating Procedures (S.O.P.s) contain policy statements for the submission, receipt, handling, transfer, and disposition of all property and evidence. These written directives should establish rules that apply to all employees of the agency as they pertain to property and evidence and include such areas as:

- requiring all property/evidence to be logged into agency records as soon as practical
- requiring all property/evidence to be placed under the control of the property room before the officer ends his or her tour of duty
- requiring a numbered report detailing the circumstances by which the
- property and evidence that comes into the agency's possession and describing each item of property/evidence submitted

- requiring that a written receipt be issued to the finders/owners of property that is taken into custody with information on how to retrieve the items retained, when applicable; i.e., found property and safekeeping
- assigning the responsibility to identify and notify the owner or designee regarding the disposition of property/evidence in the agency's custody
- establishing procedures for the temporary release of property/evidence items from the control of the property unit; i.e. court, prosecutor, crime lab, and other agencies
- requiring employees who submit evidence to comply with established packaging directives
- requiring employees to comply with purging and review notices that have been disseminated from the property officer

Packaging Manual: Law enforcement agencies should develop specific guidelines for the packaging and labeling of property/evidence that meets the needs of their agency and the crime lab servicing the agency. These guidelines should be disseminated in a manner that all persons who book property/evidence have access to the guidelines and are held accountable to follow them. One recognized method would be to develop a guide that provides both written instructions as well as photographs that illustrate the required packaging protocol.

Property Unit Procedures Manual: A law enforcement agency should develop or compile and publish a detailed Property Unit Procedures Manual on the receipt, handling, storage, and disposition of property/evidence for property unit personnel. Additionally, the Property Unit Procedures Manual should provide both supervisors and managers with detailed descriptions of subordinate responsibilities.

The elements contained in a Property Room Procedural Manual should include, but are not limited to:

- | | |
|-----------------------------------|----------------|
| • receipt of evidence | • auction |
| • documentation | • diversion |
| • assignment of storage locations | • release |
| • temporary releases/movement | • housekeeping |
| • tickler files | • audits |
| • purge review protocols | • inventories |
| • disposition of evidence | |
| • destruction of evidence | |
| • | |

All directives and manuals should be reviewed and updated annually by the supervisor or manager to ensure that policies and procedures are up to date, necessary, and feasible.

IAPE STANDARDS SECTION 3 – PACKAGING

Standard 3.1: Packaging Requirements

Standard: Packaging should be used to protect items from the loss of evidentiary value from cross-contamination or unintentional obliteration while permitting uniform storage of like sized envelopes, boxes, or bags.

Definition: Packaging refers to the manner in which items with potential evidentiary value are wrapped, bagged, or boxed to be preserved, documented, and labeled.

Reasoning: Guidelines should be developed in a manner that provides the submitting employee direction in the approved method of both documenting and packaging property and evidence. The purpose of appropriate packaging is to both protect the evidentiary value of the item inside while providing a uniform size container that permits more efficient storage and retrieval.

In order to provide necessary information to the submitting employee, the agency should develop what it considers to be appropriate packaging methods **based upon the needs of the crime lab used by the agency** and its own storage requirements.

A packaging manual that uses digital photos with a brief narrative description should be considered to best illustrate the approved method. The below list is a generic example of items that are commonly submitted to property rooms and should have packaging standards developed that are consistent with the lab and department storage needs:

- ammunition
- bicycles
- bio-hazardous materials
- bladed or pointed weapons
- bulk items
- cell phones
- computers
- money
- digital media
- documents
- electronics
- explosives/fireworks
- firearms
- flammables
- hazardous materials
- jewelry
- latent fingerprints
- magnetic storage media
- drugs
- photographs/film
- sexual assault evidence
- syringes/sharps

Departmental policy should clearly state that any deviation in packaging methods that does not meet the property unit's standards will be refused and the booking officer shall be notified through normal channels to correct the problem. This principle is known as the "Right of Refusal".

Regardless of the packaging method used, the package should have an identifier (e.g., case number, control number, item number, etc.), which corresponds to the item description noted on the property/evidence report (e.g., evidence tag, property sheet, property receipt, property invoice, etc.). A package containing numerous "miscellaneous items" that may be of value should be refused.

Biohazard labels should be available and used on all items suspected of being contaminated with body fluids. Evidence sealing tape should be placed on all packages where contamination or integrity may become an issue. Color-coded stick-on labels may be used to designate specific types of evidence, such as homicide related, Officer-Involved-Shooting, Found Property, and Property for Safekeeping. Color-coded labels can also designate what year the item was taken into custody.

IAPE STANDARDS SECTION 4 – DOCUMENTATION

Standard 4.1: Documentation – Property Report

Standard: The law enforcement agency should develop and use a Property Report that meets its needs for identifying the owner/finder/suspect/victim, describing the property, and tracking items to document the chain of custody.

Definition: A property report is a computerized record or paper document used to record data as it pertains to the handling, tracking, and storage of property/evidence.

Reasoning: A property report or computerized property record is the basis for documenting the chain of custody of all items that enter the property room.

Suggested information needed on a Property Report form or Property Record:

- Booking officer name and badge/serial number
- Case number or incident number
- Unique control or tracking number
- Bar code/item number
- Description line for each item
- Category of items; i.e. firearm, drugs, etc.
- Type of item, i.e. Found, Safekeeping, Evidence, For Destruction
- Owner, Victim, Suspect box
- Address/Phone # of parties involved
- Type of Crime (i.e. Robbery)
- Felony/Misdemeanor/Infraction/Other
- Date / time item was submitted
- Receiving property officer name and employee/serial number
- Date / time received
- Location stored
- Chain of custody (tracking)
- Investigating officer assigned to case
- Investigating officer approvals to release/dispose
- Approval date
- Final Disposition
- Driver license/other identification (person released to)
- Released by property officer/Date/Time
- Destroyed by property officer/Date/Time

Each item of property or evidence should have its own unique tracking number as no two items in the inventory should have the same number.

Once received by the property officer, the location the items are assigned for storage should be placed on the Property Report, or in the computer Property Record.

If a manual system is used, consider filing the corresponding paperwork of the items that are physically present in the property room together by control number in one “Active” file, and items that are no longer present in another “Closed” file. This may later facilitate the inventory process. The property reports for Found Property and Safekeeping should also be segregated because of their shorter turnover time.

Standard 4.2: Documentation - Computerization

Standard: Computer systems should enhance the ability of the property officer to track and manage the inventory with greater efficiency and accuracy.

Definition: Computerization permits organizing data to provide useful records and reports.

Reasoning: Computer software must provide the ability to track and manage the inventory of the Property Room.

The following are recommended fields for a well-designed system:

- Case number
- Control number or tracking number
- Date and time received
- Booking officer name and badge/serial number
- Name: Suspect, Victim, Owner, or Finder
- Addresses: Suspect, Victim, Owner, or Finder
- Telephone number
- Investigating officer
- Type: Evidence, Found Property, Safekeeping, and For Destruction
- Crime code-statute number
- Crime type - robbery, homicide, assault, etc.
- Crime class - felony, misdemeanor, infraction, etc.
- Category - drugs
- Description of item, make, model, serial, etc.
- Storage location
- Purge review date

The software should provide standard and custom reports that allow the routine review of all items on a scheduled basis. Computerized evidence software must maintain the chain of custody to ensure system integrity. At a minimum, it is suggested that a selected system provide the following:

- The capability for complete and accurate chain of custody records.
- Cash management and accountability relative to property and evidence.
- The ability to print barcodes for all items and storage locations.
- Providing purge review data
- Ability to generate basic reports, such as:
 - Firearms – Pending Destruction with complete descriptors, such as make, model, serial numbers, caliber, etc.
 - Drugs – Pending Destruction with complete descriptions of substance, weight, packaging type, etc.
 - Money - Pending Transfer with total calculated dollar amounts and by case.
 - Auction Items - Pending Transfer with complete description, make, model, serial number, etc.
 - Items Received (between specified times).
 - Items Released/Disposed (between specified times).
- Tickler Files:
 - Items out to court.
 - Items out to crime lab.
 - Items to other agency
 - Items out for investigation

Barcoding, a common method used to track evidence, has become particularly popular. There are two important reasons for agencies to add bar code systems - accuracy and speed when conducting inventories.

A well-designed system will make the inventory process much easier, allowing the user to scan items on the shelves for comparison with existing computer records. During the inventory process, the system should provide two exception reports: a list of items missing that should be present, and a list of items on the shelf that appear in the computer at another location, e.g. (released, disposed, etc.).

The selection of any system for use in the property room should be made in consultation with the property unit personnel to ensure that the needs of the property officer(s) are being addressed. It is extremely important that old data, either from a previous computer system, or from an existing paper-based system, be integrated into any new property system. Placing old data into the new system will permit management of the oldest items on the shelf. These are the items that generally hamper the operation.

Standard 4.3: Documentation – Forms

Standard: Forms should be used to: properly track movement, provide disposition notices and approvals, provide pickup notifications to property owners, document access to restricted areas, and document property releases.

Definition: Forms are an official document used to record data.

Reason: Forms are needed for documentation of the handling, submission, tracking and disposition of the items. Forms should be developed to meet the needs and record the data for the Property Unit.

The following forms are suggested to document the various actions, movement, and authorizations needed to manage and track the inventory. Many of the forms may include multiple components of the listed items.

- A Property Report is used to identify the booking officer, why the property was seized (evidence, found property, safekeeping, etc.), identify the item, and assign a control number. This form may also be used to document other tasks, such as tracking movement, approvals, releases, etc.
- A Chain of Custody Report is used to document the movement of evidence from the time it is seized, signed out to the crime lab, signed out to court, and eventually authorized for disposition. This could be included in the Property Report above.
- A Property Receipt is used to document the receipt of property by the department and a copy should be given to the owner/finder with information on how to claim the item.
- A Currency Report is information that is generally captured on the face of the currency envelope, but may be included with a package of **money** that documents the count by denomination, who counted the **money**, and who verified the count.
- A Property Release Notification may be a letter or postcard that notifies the owner of property that an item is ready for release, and contact information to obtain the item. This may also contain time constraints (drop dead date) that requires action to be taken prior to a specified date.
- A Court Receipt is used to document that an item of evidence has been retained by the court and entered as court evidence. This form is used to capture the name of a person who is receiving the evidence for the court.
- A Court Receipt Not Returned is used to notify an officer that evidence that was checked out by him/her has not been returned in a timely manner and that the evidence must be accounted for as soon as possible.

- A Firearms Receipt is used to document the seizure of a particular firearm for safekeeping. The form provides the owner with the reason for the seizure and the process needed to reclaim the firearm.
- An Evidence Correction Notice notifies the booking officer that the item submitted does not comply with department packaging standards and must be corrected before it can be received by the property room.
- The DNA Destruction Notification Letter notifies a defendant and attorney that biological evidence pertaining to the case will be destroyed by a specified date unless a motion is filed requesting the retention for future testing.
- The Property Release Authorization Form documents the authorization of the investigating officer to release evidence for its ultimate disposition: release to owner, divert, auction, or destroy.
- The Access Log documents the entry of persons, who are not assigned to the property room, into the restricted areas of the property room, when, for what reason, and who accompanied the visitor.
- The Property Transfer Form documents that the described property or evidence items were released to a specified person and agency. This information may be included with the Chain of Custody form.

Unofficial forms that are created by individuals in small work groups to solve specific problems should be referred to a management committee for departmental approval. Supervisors should be aware of unofficial forms that are created by well-intentioned employees, as these forms may be subject to Discovery in a court case.

Standard 4.4: Documentation – External Movement

Standard: Whenever evidence is transferred from the property room to an external location, such as court, the crime lab, or other agency, its destination and the person responsible should be tracked and monitored by either a paper or electronic tickler file until it is returned, or its final disposition is documented.

Definition: Tracking and monitoring refers to documenting who is responsible for taking possession and delivering evidence from the property room to an external location, such as the crime lab or court.

Reasoning: The external movement of evidence needs to be closely monitored to ensure that it is returned in a timely manner. Items that are signed out for court should be returned by the end of business on the same day unless it is received by

the court as an exhibit. Evidence that is not returned should be inquired about on the next business day. When evidence has been entered as a court exhibit, policy should require that the evidence be signed for by an official court representative and the receipt returned to the property officer.

Evidence signed out to the crime lab should be periodically inquired upon to ensure that the item has not been lost and is still in the custody of the lab. The status and date checked should be documented.

Departmental policy should also provide directives for any officer signing out evidence for investigative purposes as to whether the item can be stored outside the evidence room for what length of time, and how it should be secured to protect its integrity.

Department policy should prohibit permitting evidence to be signed out for investigation or to another agency without the knowledge of the investigating officer or supervisor.

IAPE STANDARDS SECTION 5 – FACILITIES

Standard 5.1: Facilities – Construction

Standard: Property facilities should be constructed to provide levels of security that will deny unauthorized entry, and provide a safe work environment.

Definition: Facilities construction refers to how evidence storage areas are constructed, what materials are used, and what special considerations are necessary.

Reasoning: The following criteria should be considered when constructing an evidence storage facility:

Exterior Walls

The building materials should ideally consist of concrete blocks with concrete filled cells, poured concrete walls, tilt-up concrete walls, or other similar material. Other types of prefab or modular construction *may* be suitable under some conditions, such as metal or brick buildings.

Interior Walls

It is best to avoid sheetrock or drywall, as it can easily be penetrated. In the event drywall is used, it should be backed with plywood, wire mesh, a double layer of drywall, or laminated gypsum board. All interior walls should extend from the floor to the roof, or the floor pan of the next level. This prevents access into a controlled area by climbing over a wall through a suspended ceiling.

Windows

The room(s), if possible, should be designed without windows. In the event windows are present in an existing structure, they should be fitted with bars or mesh to enhance security and discourage entry.

Roof

The exterior roof should be constructed of materials that are resistant to entry and meets current disaster resistant building codes for the risks associated with the location, i.e.: tornado, hurricane, earthquake, or wild fire.

Doors

Exterior doors should be metal clad with metal frames. The hinges to these doors should always be located on the inside unless they are special security hinges.

Interior doors should be solid-core or metal clad. Half-doors or Dutch-doors, where permitted by code, should be dead-bolted on both halves.

Ventilation

The property room should be ventilated in a manner that controls heat, cold, humidity, and odors. Special consideration should be given to DNA related storage areas to control heat and humidity that tends to degrade biological evidence. Maintaining the room temperature in a controlled environment (60 to 75 degrees, with relative humidity that does not exceed 60% is recommended).

Any area that is used for storing drugs should be independently ventilated in a manner that noxious fumes are removed from the building, and not re-circulated into the building's heating, ventilation, and air conditioning (HVAC) system. The proper design of a drug storage area should include a "negative pressure" ventilation system that changes the air in the storage room approximately 10-12 CPH (changes per hour).

Heating, air conditioning, and ventilation system duct or registers should be constructed to prevent unauthorized entry into the secure storage area.

Standard 5.2: Storage Facilities – Layout

Standard: The property room layout should take into consideration adjacencies between work areas, workflow, temporary storage, long-term storage, high profile items, bulk or oversize items, biohazards, hazardous materials, cold storage, destruction area, administrative area, and release areas.

Definition: The floor plan used to make the workflow systems merge efficiently together within the property unit.

Reasoning: The property room should be located in a convenient place within the department for submittal and release. A basement area is an acceptable location for a property room if loading dock or access to the parking lot for loading/unloading is available.

Vertical movement between floors may create both logistical and efficiency issues.

Many agencies have found that placing the property room adjacent to an area set aside for report writing and packaging is most efficient. In this configuration, pass-through lockers may be used by employees to submit property and evidence into the property room after packaging the item.

The design of a public release counter should be as close to the department's front lobby as practical to limit public access to secure areas within the building. In larger departments where numerous transactions routinely occur between officers and the property officer, consider having a separate service counter that is out of view of the public. This is important to protect the identity of undercover officers.

A well-designed property room will provide office space for the property officer located outside the actual evidence storage area. Having the office adjacent to the storage area provides a workstation that is not within the confines of the secure storage area.

The layout of the long-term storage areas should include enhanced security areas for firearms, drugs, and money. Storage areas for general evidence should include specifically designated storage areas for envelopes, paper bags, boxes, long items, bulky items, biohazards, flammables, hazardous materials, items pending destruction, items pending auction, Found Property, and Property for Safekeeping.

Standard 5.3: Storage Facilities – Storage Schemes

Standard: An orderly system for numbering and storing property/evidence being retained by the property room should be provided.

Definition: A system of numbering or labeling the building(s), room(s) and shelves/bins that store property/evidence held in the custody of the law enforcement agency.

Reasoning: By developing a packaging standard around the shelving and bin configuration, or vice-versa, an agency can maximize the efficiency and space of its property/evidence storage, and minimize the effort it takes to store and retrieve it. A suggested scenario for developing an overall organization pattern would be:

- Review the historical record of the types and quantities of property/evidence that are regularly booked into the property rooms.
- Designate particular areas of the storage facility for particular categories of property/evidence. For instance, Property for Safekeeping should be nearest the public counter, and homicide evidence in the farthest away location due to the frequency that these locations are accessed.
- Design standard packaging containers based on the size of the most commonly found items.
- If shelving is fixed, design your containers around the shelving sizes. If shelving is adjustable, use containers that are standard sizes to minimize costs. If several standard size envelopes were designated, then the appropriate containers, drawers, and bins could be designed to store selected envelopes in specific shelving locations.
- The use of high-density (mobile) storage shelves is the most effective method to significantly increase storage space. All rooms, bays, bins, shelves, racks, and containers need to have a clearly readable address.
- Being able to specifically identify and document each storage location used by the agency is a critical step in efficient storage and retrieval.

Standard 5.4: Storage Facilities – Safety / Environment

Standard: The property unit should provide a safe and environmentally friendly work environment that addresses such concerns as:

- fire, flood, earthquake, tornado, and hurricane hazard mitigation
- fire-life safety equipment
- ventilation
- lighting

Definition: Safety/Environment refers to the necessity to provide a work place free of uncontrolled physical hazards and a plan for storing potentially dangerous items.

Reasoning: The property unit should provide the necessary equipment and tools to ensure a safe working environment in all property and evidence storage and work areas. The property office and storage areas should be equipped with all currently required safety equipment, including a fire alarms, fire sprinklers, smoke detectors, fire extinguishers, emergency lighting, and close access to an eyewash location.

Older existing structures should be upgraded to current regulations any time improvements that require a building permit are made. All existing structures should all be equipped with smoke detectors and fire extinguishers regardless of whether or not they are legally mandated.

Consider providing larger evidence rooms with a communication device to permit summoning assistance, if needed, from deep within the storage areas. The property officer's efficiency is also enhanced because he/she would not need to walk to the office area to communicate.

Other protective supplies and equipment such as gloves, goggles, paper masks, and disposable aprons/jumpsuits/hats should be provided and be available for use as an option by individual employees.

The storage of departmental supplies and equipment, such as uniforms, vests, holsters, tactical gear, flashlights, batteries, etc. are often included with evidence storage duties. While the Quartermaster or Supply Sergeant duties have many similarities with evidence retention, and are compatible as a related duty, the two functions are separate and should not be grouped together in one area. Supplies are not evidence and should not be commingled.

Ventilation of noxious fumes is extremely important and is addressed in Section 5.1 Facilities - Construction.

Adequate lighting is very important in helping to prevent avoidable injuries. The lighting should be sufficient for an average person to easily read the labels and numbers on packages located on the lower shelves. This is often a problem when shelves are retrofitted to a room where they were not originally intended. This is a special problem with high-density mobile shelving. Heavy shadows are created any time lights are covered by a moving shelf. This may be easily mitigated by running a florescent tube light perpendicular to the moving shelves, instead of parallel.

IAPE STANDARDS SECTION 6 – TEMPORARY STORAGE

Standard 6.1: Storage – Temporary

Standard: Secure temporary storage for all size items should be provided to protect property and evidence from tampering, theft, contamination, and the environment.

Definition: Temporary storage refers to the period of time between when an item is submitted, until the time it is actually received by the property officer.

Reasoning: Since there is no one person in physical control of the property/evidence during the time of temporary storage, a storage facility and methodology should be provided that will allow a person to testify as to the security of the property/evidence while in temporary storage. The precedent is that evidence stored in the property room's temporary storage is deemed to remain secure within the chain of custody, even though the property room has no employees present during certain hours. The physical security of the temporary storage facility, and the procedures restricting access during that time, allow the court to logically determine that the property officer was "in possession" of the items, even though he or she was not physically present.

Failure to place items in a designated secure temporary storage location before the end of the shift makes the chain of custody suspect and open to a defense challenge. Departmental policy should prohibit storing evidence in personal lockers, vehicles, desks, or other unauthorized locations for this reason. An exception to storing evidence in vehicle trunks may be necessary for rural agencies where personnel don't respond to their headquarters on a daily basis.

Small-to-Medium Size Items: The most convenient method of providing temporary storage consists of an assortment of lockers in a common wall between the property room and the room where property/evidence is packaged by the booking officer. Such lockers should be of various shapes and sizes. Once evidence is placed in temporary storage, it should immediately be secured and accessible only by the property room personnel.

Oversize or Bulky Items: An area designated for the temporary storage of oversized or bulky items is recommended so that such items are not commingled with other evidence items and are safeguarded from potential tampering, theft, or the environment. Security wire mesh or chain link cages are effective for securing large items.

The most effective method of locking temporary storage areas or lockers is to use a self-locking system that once secured, may not be opened by anyone other than the property officer. Padlocks should be secured to the locker frame to prevent it being removed and a having a key made. The key code on the bottom of a padlock should be removed before being placing it into service. Keys should not be left in empty lockers to prevent a key being removed and duplicated.

Biohazard Items: Secure temporary storage of biohazard items is recommended. Some items may require drying if still in a wet or moist state. A lockable drying locker or cabinet is recommended in order to dry body fluids. This location should be easily decontaminated and made of a non-porous material. A decontamination log should be maintained to document when the location was last cleaned.

In most instances, wet body-fluids should be dried and subsequently frozen as soon as practical in order to conform with forensic laboratory standards. Check with the local crime lab for their requirements.

Blood/Urine: Check with the crime lab to verify if wet blood and urine should be refrigerated or may temporarily stored at room temperature. The use of “grey top” blood vials with preservative may still require refrigeration for accurate toxicology tests.

Hazardous Materials/Flammables: A temporary storage location for small quantities or samples of hazardous materials should be provided. This location should be open to the outside where any escaping fumes will not enter the building where it could become a hazard to employees. All hazardous materials should generally be stored in an airtight container. The use of an “explosion resistant” cabinet is highly recommended. Large quantities of such hazardous materials should not be stored in the property room. Consider saving a sample of the larger quantity for scientific analysis and obtaining a court order through proper channels to dispose of the remainder in most cases. The Fire Department should be consulted for acceptable storage methods.

Perishables: As a general rule, perishables should not be stored in the Property room. However, there are circumstances that may require such storage. For this instance, a dedicated refrigerator and a freezer should be made available for temporary storage. Such a refrigerator or freezer should be designed with lockable compartments or doors to protect against commingling evidence from different cases, or potential tampering or theft.

Drop-Slots: A drop-slot in a designated locker is one of the most effective methods of securing small items in a method that does not use all available unlocked lockers. Small items may include, but are not limited to; film, latent prints, tapes, magnetic media, CDs, DVDs, etc.

Trouble Locker: Consider designating one locker as a “trouble locker” to hold improperly documented or packaged items until the submitting officer can make corrections.

IAPE STANDARDS SECTION 7: LONG-TERM STORAGE

Standard 7.1: Storage Locations - Long Term

Standard: Buildings, rooms and shelves/bins should be provided for the long-term storage of property/evidence for the duration of time it is held in the custody of the property room.

Definition: A long-term location is designated to keep items retained in the custody of the agency until they are diverted, sold, released or destroyed.

Reasoning: Appropriate storage facilities are needed to accommodate the long-term storage of property and evidence. Building(s) or rooms should be large enough to secure all evidence. Additionally, enhanced security storage should be acquired for the storage of high profile items such as firearms, money and drugs.

Standard 7.2: Storage Locations - Evidence

Standard: Evidence held in the custody of a law enforcement agency should be stored in a manner that facilitates efficient use of space, permits quick retrieval, minimizes safety hazards, prevents cross-contamination and facilitates conducting an inventory.

Definition: A long-term storage of evidence is a place designated to keep evidence items segregated from other types of property retained in the custody of the agency until they are disposed, sold, released or destroyed.

Reasoning: Evidence may be held in the property room anywhere from just a few days to years. Most items need to have a long-term location designated for various categories of evidence, until the item reaches its final disposition for release, destruction, auction or diversion.

Envelope Storage: Storage space should be allocated for various sizes of envelopes designated for small items. These envelopes should be filed by the tracking number. Providing shelves for different size envelopes make for easy storage, retrieval and inventories.

Paper Bag Storage: Storage space should be allocated for various sizes of bags designated for medium size items. These bags should be filed by the tracking number that is visible without having to move the bag. Providing shelves for different size bags that are only one bag deep makes for easy storage, retrieval and inventories.

Box Storage: Storage space should be allocated for various sizes of boxes designated for larger items. These boxes should be filed by the tracking number. Providing shelves for different size boxes makes for easy storage, retrieval and inventories.

Drugs, Money, and Firearms should have specialized storage locations with enhanced security. (See Section 9, Section 10, and Section 11 respectively regarding those items.)

Homicide Evidence: By its very nature, homicide evidence has no statute of limitations and is frequently retained for decades, and in some cases forever by statute. Given the lengthy storage requirement, homicide evidence should be grouped together and relegated to those areas that are least accessible in the property room. Otherwise, the property officer will walk past the homicide evidence to get to other items that need to be accessed more often.

A large percentage of homicide evidence may contain DNA and trace evidence. Special attention should be given to ensure that all biological and trace evidence is preserved in a manner that protects it from cross-contamination and degradation. Each agency should obtain a written protocol from the forensic lab that it utilizes on how to store and preserve biological and trace evidence.

If the evidence is submitted to the forensic lab for analysis and returned, property room policy should define how the returned item(s) should be stored for long-term preservation.

Homicide related firearms, drugs, and **money** should be stored in the respective designated storage areas, not with the homicide evidence. The reason for segregating these items from other homicide evidence is to place them in enhanced security (see Sections 9, 10, and 11 regarding enhanced security) and to permit the items to be routinely accounted for in an inventory.

Magnetic Tapes: Audio and video tapes should be placed in a location that is temperature and humidity-controlled, and free from magnetic fields. High voltage wires, transformers, speakers, and electric motors may generate strong magnetic fields that could harm the magnetic data.

Hazardous materials and flammables: These items generally do not belong in the confines of the property room; however, small quantities and samples may be

stored in adequate containers in an area designated for such storage. Hazardous and flammable storage may be in a specially designed cabinet that is placed in a location where fumes would not pollute the air in the room or the building.

Syringes and Sharps: Syringes and sharps should only be stored in an approved sharps container and should be stored in a designated area for employee safety. Sharps containers should not be commingled with other items of evidence to prevent accidental cuts or needle sticks.

Syringes and needles are generally being booked into evidence less frequently due to the potential hazard of a needle stick injury. Agency policy may permit syringes and needles to be photographed and destroyed in lieu of being booked as evidence. Any liquid present in a syringe should be emptied into a small glass vial for subsequent analysis, if appropriate. Always dispose of the syringes and needles in a manner approved for medical waste, which differs by state.

Cold Storage: Items that need refrigeration or freezing should be placed in a respective refrigerator or freezer designated for evidence storage only, depending upon the requirements of the type of evidence and the crime lab's recommendation. Any refrigerators or freezers used to store evidence should be equipped with a temperature monitoring and recording device that can provide storage temperature fluctuation information to the forensic lab for their quality control requirements.

Liquids should generally not be frozen in any glass or hard plastic containers, as the container may break.

Evaluation criteria should be developed to ensure that only those items that require refrigeration or freezing are in fact being stored in those locations. Once the item has been tested, consult with the crime lab to determine if it can be stored at a room temperature controlled environment. This may alleviate the need to acquire additional refrigerator or freezer space in the future.

Future crime lab requirements may direct collecting agencies to freeze larger amounts of evidence than is presently needed, and this may lead to an increase in the demand for freezer space. In the event that a new facility is being designed, it is suggested that the servicing crime lab be consulted to determine their evidence preservation recommendations for long-term storage.

Bulky Items: A bulky item can be defined as any item that cannot be conveniently stored readily on shelves and bins due to size or shape. Bulky items may include tires, vehicle parts, carts, lawn equipment, large TVs, hydroponic grow equipment, etc.

Storing bulky items on the floor within painted grids is an acceptable option. The use of cargo containers, pallet racks, or a satellite facility may be required depending upon the size and quantity of items.

Long, Slender Items: The storage of long items such as poles, clubs, shovels, sticks, and similar items are difficult to store in an organized manner. Three ways to make these items easily retrievable are:

- 1) items can be stored vertically by constructing a box with a wire crosshatch at the top and near the bottom to allow items to stand up in an identifiable grid section;
- 2) items may be stored vertically in a container made of large diameter agricultural PVC pipe; or
- 3) items may be stored horizontally on a deep shelf with hang tags on one end making them easy to identify.

Bicycles: Bicycles should be stored in a manner that is both space efficient and permits easy retrieval of individual items while not compromising the safety of the property officer. The use of hooks on an overhead rack from which to hang bicycles is one of the most space efficient methods commonly used. Separate bikes by evidence, found property and safekeeping to facilitate the timely purging of the bikes. Interior storage should be provided to avoid potential liability for damage due to weather exposure.

Latent Fingerprints: Latent fingerprints that are stored inside the property room should be segregated from other evidence and filed in a systematic manner.

There is no specific standard or requirement that latent fingerprints must be stored inside the property room, only that they should remain secure, tracked, and documented as evidence. Storing fingerprints in some type of locked file cabinet in a location outside the property room, such as an agency's Identification Section, is an acceptable practice.

Photographs: Photos, film canisters, negatives, and prints should ideally be packaged in a uniform size envelope, and store in a drawer, bins, or on a shelf, that only contains photographic evidence.

Digital Images:

(See additional information in Digital Evidence Management, Standard 16)

Digital images do not need to be stored inside the property room if they are stored in a dedicated, password-protected computer/server. It is imperative that access to the photos is limited in order to protect the chain of custody and unauthorized access to photos. A backup copy of the digital image may be downloaded onto a CD or DVD and stored in the property room as a duplicate or multiple original.

Electronic Media:

When storing CDs and DVDs:

- Keep dirt or other foreign matter away from the disc.
- Store discs upright (book style) in plastic cases specified for CDs and DVDs.
- Leave discs in their packaging (or cases) to minimize the effects of environmental changes.
- Store discs in a cool, dry, dark environment in which the air is clean.

Computer equipment, flash drives, and hard drives should be protected from dust, moisture, sunlight, heat, and static electricity. Consider wrapping computer equipment in anti-static bags prior to placing on shelves.

Electronics: Large bulky items, such as TVs, sound systems, computer towers, printers, speakers, etc. may require tall and deep shelves. Consider placing all like items together to best utilize space.

Cell phone data (See additional information in Digital Evidence Management, Standard 16)

Cell phone data is a frequent source of vital evidence in major cases. Many cell phones have the ability to wipe the data clean upon receipt of command from a remote source. Consider storing all phones seized as evidence in a protective Faraday bag, or other shielded location that prevents a command from being received to destroy all data.

Vehicle Storage: A vehicle held as evidence should be stored in a secure location where it is protected from potential tampering and from the outdoor elements, whenever possible.

In the event that vehicle storage cannot be accommodated, a contract with a reputable tow yard for towing and storage may be acceptable; however, the site must remain secure from the public and tow yard employees. Periodic inspection to ensure the preservation of this evidence is suggested. An alternative is to have a cargo container for the temporary storage of a vehicle used in a major crime. This will ensure controlled access, but containers do have the possibility of extreme temperature variations.

Standard 7.3: Storage Locations - Found Property

Standard: Found property should be segregated from items of general evidence and placed in a location that is easily accessed and close to the public release area.

Definition: Found Property storage is distinguished from general evidence by its short turnaround time and by designating its location where it can easily be viewed and retrieved.

Reasoning: Found Property storage is needed because law enforcement agencies are generally required by statute to temporarily take property into custody when citizens and public officials report finding items that belong to others. A copy of the receipt provided to the finder should accompany the found item to permit the property officer to notify the finder if an owner cannot be located.

When found property is turned into the property room, the items should be held the minimum amount of time mandated by laws and policy/procedures. For this reason, Found Property should generally be kept segregated from evidence due to its short-term storage requirements and the possibility of commingled items being overlooked for years.

Exception – Firearms should be stored with other firearms, but conspicuously labeled as Found Property. Found money should also be stored in a segregated location along with other packages of money, but conspicuously labeled as Found Property.

Standard 7.4: Storage Locations - Property for Safekeeping

Standard: Property for Safekeeping should be segregated from items of general evidence and placed in a location that is easily accessed.

Definition: Property for Safekeeping consists of non-evidentiary items of personal property that have value and are temporarily stored for the owner due to incapacity or arrest.

Reasoning: Safekeeping storage is distinguished from general evidence by its short turnaround time and by designating its location where it can easily be viewed and sorted according to time retained.

When Safekeeping items are submitted to the property room, the items should be held the minimum amount of time mandated by laws and policy/procedures. Safekeeping should generally be kept segregated from evidence due to its short-

term storage requirements and the possibility of commingled items being overlooked for years.

Exception: Firearms held as Safekeeping should be stored with other firearms, but conspicuously labeled as Safekeeping. Money held for Safekeeping should also be stored in a segregated location along with other packages/envelopes of money, but conspicuously labeled as Safekeeping. Drugs are generally not held for Safekeeping, but temporarily storing prescription medication is a possibility and should also be conspicuously marked.

IAPE STANDARDS SECTION 8 – SECURITY

Standard 8.1: Security – Policy

Standard: Written policy should require access controls that will ensure that unauthorized persons do not enter secure areas. These controls include, but are not limited to: key control, changing locks or access codes with changes of personnel, access logs, after-hours procedures, use of surveillance cameras and alarms.

Definition: A written policy that defines all issues related to the security of the various property and evidence storage areas.

Reasoning: Enforceable written policies are needed compelling employees to adhere to security requirements that, if violated, can jeopardize the integrity of the property room and interfere with the chain of custody.

A written directive should require that only authorized personnel have access to the areas used by the agency for storage of property and evidence. Policy should define who has access to keys, access control, key duplication, changing of locks or access code with changes of personnel, access logs, after-hours procedures, and alarm testing.

Consideration should be given to including policy direction for after-hours key control. For example, may the evidence room keys be taken home at night and not stored in a locked location, or should the keys be deposited in a drop-safe at the end of the shift?

It should be clearly stated in the agency's policy that anyone who has keys or access to the keys will be questioned and may be considered as a suspect in an investigation relating to any missing evidence. If the Chief/Sheriff/CEO has a key, it may also negate his/her ability to oversee a criminal and/or administrative investigation.

Standard 8.2: Security – Access

Standard: A written policy should permit only authorized personnel to have access to the property room storage areas, and no one other than property unit personnel should have keys or mechanical/electronic access to the property storage areas.

Definition: Access refers to the process that controls entry into restricted areas.

Reasoning: Entry into restricted storage areas should be closely controlled to prevent accusations of alteration, unauthorized removal, theft, or tampering with property or evidence stored by the agency. Access restriction protects the proper chain of custody. Those permitted access should include the property officer(s), and the supervisor. All other persons who enter the property room/storage areas must be documented in an Access Log with the reason for needing access and they should be escorted at all times while within the room and/or storage areas.

The manager/administrator who has oversight of the property unit and the Chief/Sheriff/CEO of the agency should not have independent, unescorted access into the property room and/or storage areas. If one of those individuals has a key or access, the agency should establish a system that requires another authorized person to disarm the alarm, thereby creating a two-person rule.

As noted in Standard 8.1, having independent/unescorted access into the property room/storage areas may adversely impact an administrative inquiry and/or a criminal investigation. The agency's policy should clearly articulate that anyone, including the Chief/Sheriff/C.E.O., who has independent/unescorted access into the property room/storage areas might be investigated if there is any breach of security in those areas.

Standard 8.3: Security – Access Logs

Standard: An access log should be maintained for documenting any entry by anyone that is not assigned to the Property Unit.

Definition: An access log is a document that records the entry of non-assigned personnel into the property room, and why the entry was necessary. The log should record name, ID number, reason for the entry and which employee assigned to the property unit escorted the person.

Reasoning: Personnel outside the property unit may occasionally have a need to enter the storage locations of the property unit. Detectives may need to view a large piece of evidence that cannot be easily moved outside of the permanent storage location, or some type of building maintenance issue might require access. These persons should not be allowed access without immediate supervision at all times.

Supervisors should review the access log on a monthly basis and it should also be inspected as part of a periodic audit by the agency or outside consultants. The purpose of the inspection is to ensure that the department policy is being complied with.

Evidence or property is often discovered missing years after the actual theft. Therefore, it is imperative that access logs be maintained for at least 10 years so that they are available to investigators. Additionally, in the event of a defense challenge in court, the retention of the logs should reflect the time period for the oldest item of evidence in the property room in the event it is challenged in court.

Standard 8.4: Security – After Hours Access

Standard: It is always suggested that an assigned property officer be called in for after-hours entry or the key-holding supervisor if the property officer is not available. If this is not practical, a two-person rule is necessary, which would include the completion of the access log.

Definition: After-hours access to the secure property room means anytime an assigned property officer is not available for call-out, and there is a compelling reason for immediate access that cannot wait for the property officer or supervisor to arrive.

Reasoning: After-hours access by non-assigned personnel should be discouraged. In the event that after-hours access is necessary and assigned property room staff are not available for recall, policy should restrict the method of entry into the property room. At no time should one person enter alone, two individuals should be present.

Standard 8.5: Security – Key Control / Electronic Access Control

Standard: All keys, access codes, combination numbers, and proximity cards should be closely monitored, and accounted for annually. Keys should not be available to anyone other than property room personnel.

Definition: Key and electronic access control refers to accounting for all keys and access cards on a scheduled basis to guard the integrity of the evidence.

Reasoning: Conducting periodic audits of a key-holding persons' keys/access cards ensures that authorized employees have possession of them and that all are accounted for.

Backup keys to the evidence storage areas should not be utilized unless they are kept by the **Unit** Commander, or designee, in a locked safe or drawer. Entry of the Unit Commander into the property room without a second person may result

in the Commander becoming part of the investigation in the event evidence is missing.

Under no circumstances should an unsecured key to the property room be kept in a location where multiple persons have access to it, such as the Watch Commander, Patrol Sergeant, or the Officer in Charge's office.

Standard 8.6: Security - Lock Changes

Standard: Locks, access codes, and combinations to the property room should always be changed with any resignation, termination, retirement or transfer of Property Unit key-holding personnel.

Definition: Lock changes refers to changing the locks, keys, combinations or other electronic access devices which secure the storage and office areas of the Property Unit. Locking systems include, but are not limited to keys, access codes, combinations and locks.

Reasoning: Locking systems should be changed whenever personnel reassignments occur to ensure that a departing employee no longer has access to the various storage and office areas.

The property room should be equipped with high quality locks that can be replaced whenever personnel changes occur. One way to achieve this is to use interchangeable core locks that permit the keys to be changed easily and inexpensively.

Alternatives to traditional keys are either electronic locking systems or mechanical systems that may include a personal identification number (PIN) which records who accessed the door and includes date/time of entry.

When locks, access codes, or combinations are changed by an employee outside of the property unit (facilities manager) or an outside service (locksmith), the process needs to be closely monitored to ensure that the third party doesn't have the ability to gain access to secure areas. One safeguard may be to have an independent alarm system that the third party or contractor can't control or defeat.

Standard 8.7: Security – Alarms

Standard: All storage areas should be alarmed and monitored on a 24-hour basis. Storage rooms that contain guns, money and drugs should be separately alarmed or independently zoned area whenever possible.

Definition: A security alarm system may include an audible or silent signal that is activated anytime there is an unauthorized entry.

Reasoning: Intrusion alarms need to be installed so as to alert other department personnel in a 24-hour monitoring position that there has been a breach of security in a specific area.

Alarm technology now permits many different activation methods, including, but not limited to: motion, thermal, sound, contact points, pressure pads, seismic alarms, and even laser beams.

The activation of any alarm should be monitored in a communications center, front desk, Watch Commander's office, or at a private alarm company. Having a third party such as a private alarm company receiving the activation signal is a good practice as the alarm company provides an outside source for the notification process and reduces the likelihood of other station personnel from compromising the system.

Many alarm systems are capable of sending a text message alerts directed to a manager or property officer's cell phone or computer.

Rooms that contain high-profile items, such as firearms, **drugs** and **money** should be provided with enhanced security that may be achieved with alarms for separate storage areas.

Refrigerators and freezers should be equipped with alarms that indicate if the temperature changes above a designated level. The alarm should be monitored in a 24-hour location, such as the communications center, for example.

Standard 8.8: Security – Duress Alarms

Standard: Property release counters without the presence of a sworn officer should have a duress alarm to summon assistance quickly, if needed.

Definition: An audible or silent duress alarm may be used to summon assistance when a person becomes boisterous or threatening while conducting business at a public release counter.

Reasoning: Civilian personnel are occasionally called upon to release property to persons who may disagree with departmental policy, property description, or legal constraints. When this occurs at a public counter that is remote from immediate uniformed assistance, the civilian employee should have some method of discretely calling for assistance. This may be a telephone, a portable radio, a silent alarm, a duress button, or just a buzzer that remains on until it is reset.

Any type of duress alarm should be tested monthly and a record of the tests should be maintained for future reference.

Standard 8.9: Security – Video Surveillance

Standard: Video surveillance cameras should be utilized whenever enhanced security or a long-term record of ingress, movement, and egress is desired.

Definition: Video surveillance systems are used to record who and when anyone has gained entry into specific defined areas.

Reasoning: Installation of video surveillance equipment should be considered to act as both a deterrent for good internal controls and externally to dissuade unauthorized entry without detection.

All doors into a secure area should be equipped with cameras in addition to those areas where guns, money and drugs are stored. Including cameras where evidence is deposited, such as counters and lockers, can validate when evidence was submitted as well as confirming that evidence was indeed submitted. Installation of cameras at any release counter may document the release, memorialize the transaction, and may protect the agency from accusations of mishandling evidence.

Video equipment consisting of controllers and recording devices should be in a secure location and should only be accessible to the manager, as long as he or she does not have independent access to the property room. The suggested restriction is a check and balance designed to prevent any tampering with or altering the permanent record.

New digital technologies now allows the data to be stored on hard drive when there is movement in front of the camera, thus limiting the amount of data needed to be stored. The recording is initiated based upon the movement and the digital data is stored on a hard drive. Once the person creating the motion leaves, the area the recording stops.

The digital data should be stored for a period of years, e.g. at least three or four years, so that it is available to investigators should it be discovered that evidence is missing.

IAPE STANDARDS SECTION 9 – DRUGS

Standard 9.1: Drugs – Packaging

Standard: Drugs should be packaged and weighed in a manner that is consistent with crime lab requirements and department storage requirements.

Definition: Packaging refers to the manner in which drugs are preserved and labeled prior to being sent to the crime lab.

Reasoning: Illegal drugs are often made or processed with hazardous materials and should have adequate packaging to prevent leakage or the emission of gasses from the material. Contact the crime lab used by your agency to ascertain the preferred method of packaging for each class of contraband.

Some illegal drugs, such as Phencyclidine, are so potent that they should be heat sealed in heavy-duty (4.5mil) plastic bags and preferably inside a secondary airtight container.

Live plant material should generally be dried before it is packaged in a breathable container; however, some local laws may now require live plants to be preserved. Check with legal counsel when in doubt.

Whatever packaging material is used, it should be labeled with a case, item, or control number. Non-rigid plastic bags may be placed inside a “convenience container” such as a paper envelope for easier filing and retrieval.

The drugs envelope may be preprinted with prompts for case numbers, control number, defendant’s name, weights, and description for continuity in packaging and labeling. An adhesive label with descriptive prompts may also be used to assist in identifying the package. The envelope should be sealed and initialed using evidence sealing tape.

Larger quantities of drugs may require larger convenience packaging. For example, kilos of cocaine may be stored in boxes, while dried bales of marijuana may already be adequately wrapped and only require paper wrapping to preserve latent fingerprints or trace evidence.

The two most important factors when deciding how to package drugs are the crime lab requirements and the storage needs of the department. If the crime lab provides an envelope, then that becomes the standard. If there are no requirements, the agency should establish the best practice and insist personnel consistently adhere to this standard.

Most forensic crime lab accreditation standards suggest that drugs should also be stored in a room temperature controlled environment that maintains 45% to 60%

relative humidity prior to sending to the forensic lab. Storage in relative humidity outside of this range can measurably impact the item's weight and may conflict with the forensic lab's quality control standards.

Standard 9.2: Drugs - Documentation

Standard: Drugs should be described in a manner that enables the reader to visualize the item without physically examining it. Additionally, the documentation should provide a record of all parties that have handled the item, storage locations, transaction dates and times.

Definition: Documentation refers to identifying the item with a unique number, describing the item, and providing a record of all parties handling, various storage locations, along with dates and times of the transactions.

Reasoning: All drug evidence should be documented in a manner that provides a thorough and accurate description and chain of custody including, chronological documentation, and/or paper trail, a record of the seizure, custody, control, transfer, analysis, and disposition of the evidence, either paper-based or digital.

Documentation begins with assigning an individual control number or barcode number to each item of suspected contraband. The paraphernalia associated with the drug should be separated from the drug itself consistent with the instructions listed in the Packaging Manual. In a computerized system the separate control numbers may appear in one report under the case number, but the items may be individually disposed of. In a manual system, it is advisable to group drugs under one report, and items of general evidence, such as paraphernalia under another report. Evidence items should always be separated from Safekeeping and Found Property by writing separate reports since the retention periods are different.

The booking officer's documentation of drugs should **NOT** include the suspected type of drug, as this may conflict with what the actual sample contains. A generic description, such as a clear crystalline substance resembling methamphetamine or white powder resembling cocaine is generally preferred by the forensic lab to avoid the possibility discrediting the officer's experience if the test result differs from the label. Each agency should inquire with their local prosecutor to determine the desired method of documentation for their needs.

The protocols for weighing drugs should be carefully worded by the law enforcement agency to avoid unnecessary conflict with the forensic lab standards. For example, all weighing of drugs should be **consistently** performed approximate net (without packaging), or approximate gross (with packaging), along with a description of the type of scale used and when it was last calibrated. Many departments are specifying that officers use approximate weights for evidence booking, and use the crime lab analysis report for charging purposes.

Standard 9.3: Drugs – Documentation of Movement

Standard: High profile evidence such as firearms, money, and drugs leaving the custody of the agency should have the most stringent internal controls to ensure the integrity of the evidence.

Definition: Movement refers to the transfer of drugs to court, crime lab, other agency, out for investigations, and the return of the item.

Reasoning: Drugs are considered a high profile item and requires extra internal controls that provide a clearly documented chain of custody. Documenting the person who authorized the transfer, the person who released the item, and the person who received the item along with dates and times is the preferred practice. Any time that property or evidence is released to a person, the receiving and releasing investigator's signature, destination, date and time should be required.

Providing a subpoena for the court case or obtaining a supervisor's written approval provides a credible record that the drugs are being taken out of the property room for the reasons stated.

Any time there is movement of drugs from the property room, there should be documentation in the form of a tickler or suspense file that notes when items are "out to the crime lab", "out for investigation", and "out to court", "out to another agency", and who is responsible for it. This tickler file will prompt the property officer to inquire regarding the item when it has not returned in a timely manner. The property officer should be required to query all signed out evidence on a periodic basis. For example, firearms, money, and drugs should be queried on the next working day.

All drugs that have been taken to court and not returned by the end of the court day should have a receipt signed by an officer of the court and a court stamp. This receipt should subsequently be returned to the property officer in order to update the evidence record.

Standard 9.4: Drugs – Storage

Standard: Drugs should be stored separately from general evidence items in a location with enhanced security.

Definition: Regardless of the size needed, a drugs storage area should be designed in a manner that it is separate from general evidence, provides enhanced security, environmental safety, and easy retrieval.

Reasoning: The size of drug storage needed is dependent upon the anticipated quantity of drugs needing storage. A small agency may only need a locker or file cabinet; a medium size agency may need a closet or cage, while a larger agency

may need an entire room or walk-in vault. All drug enclosures should have an independent method of being locked.

Drug evidence should not be commingled with any other property types, except when a common enhanced security area is shared with the separate storage of firearms or money. Nothing precludes the enhanced security recommendations for firearms, money, and drugs from being combined into one common secure area with three distinct storage locations

The following are recommended features for a drugs storage room:

-
- A drug room, closet, or cage should be constructed of concrete block, lath and plaster, or drywall that has been reinforced with plywood or wire mesh. The room should not have suspended ceiling access from an adjacent room. Ingress should be via a solid core door equipped with a double cylinder (keys on both sides) dead-bolt keyed separately from the main property room.
- A locker, cabinet, or file drawer may be used for smaller quantities of drugs. There should be a separate padlock on a hasp to secure the door. Do not rely solely on cabinet locks that can easily be defeated.
- Multiple hasps and locks on a drug storage area may be used to design a “rule of two”, if needed. By having more than one lock with only one person having the key/access to each lock, two people are required to gain access.
- Any drug storage area or enclosure should have a separate alarm and video camera to monitor ingress and activity inside.
- Storage shelf and bin identifiers should be consistent with the storage scheme of the main Property room.
- Drugs from “Active” cases should be kept separate from drugs “Pending Destruction.” This may be accomplished by using separate shelves or boxes.

Standard 9.5: Drugs - Ventilation

Standard: Dedicated drug storage rooms should have a ventilation system that vents odors and fumes to the exterior of the building.

Definition: Ventilation refers to the circulation of fresh, outside air, within the drugs room to prevent health and environmental hazards.

Reasoning: Any area that is used for storing drugs should be independently ventilated in a manner that noxious fumes are removed from the building, and not re-circulated into the building's heating, ventilation, and air conditioning (HVAC) system. The proper design of a drug storage area should include a "negative pressure" ventilation system that changes the air in the storage room approximately 10-12 CPH (changes per hour). Negative pressure is defined as a method of providing low-velocity airflow from uncontaminated areas into contaminated areas by means of a portable exhaust system equipped with HEPA filters."

Standard 9.6: Drugs - Storage Pending Destruction

Standard: Drugs pending destruction should always be stored in a designated area that has an enhanced level of security in the property room.

Definition: Drugs for Destruction security refers to the level of security afforded to the most vulnerable items in the evidence room.

Reasoning: Drugs pending destruction have the greatest likelihood of being pilfered from storage. Storing these items in a locked room, sealed container, secured locker, or locked file cabinet provides an enhanced level of security. This segregation may occur in the same room as active drug cases.

A "rule of two" is a principle that requires two persons to jointly move or stage the drugs awaiting destruction. A "rule of two" may be created by using two different locks on the storage container, locker, or room/vault. Each person would possess one of the keys, requiring both to be present to access the secure items.

Additionally, storing drugs for destruction in an area away from active evidence provides a method to better track and visually monitor the quantity of drugs pending destruction.

Policy should define a threshold that, when met, will initiate the destruction process. A threshold can be based upon the calendar, for example, twice a year. A threshold may also be based upon quantity, such as every 20 lbs. Thresholds make all parties in the destruction process accountable and ensure that the process occurs before the drugs become a target of theft.

Standard 9.7: Drugs - Destruction Documentation

Standard: Destroyed drugs need to provide detailed documentation that defines all personnel involved in the destruction process and protocols that ensure that an independent witness is able to validate that each and every item was destroyed.

Definition: Destruction documentation refers to the memorializing of the destruction process to provide a transparent and verifiable chain of custody and final disposal.

Reasoning: Drugs pending destruction have the greatest likelihood of being pilfered from storage, or during transportation to a destruction site, as there is generally no longer any interest in the item for prosecution. As a result, there is a need for thorough documentation and verification of every step in the destruction process to leave no room for doubt or suspicion as to its final disposition.

In short, the documentation should include: who authorized the drug item for destruction, who staged and verified the item on the destruction list, who sealed the item in a destruction container, who transported the destruction container to the destruction location, and who witnessed the physical destruction of the drugs.

Maintaining a running drug destruction list that includes the case number, item number, tracking number, defendant's name and an accurate description of each item enhances the integrity of the process. Once the drugs authorized for destruction have been listed, they should be staged and validated by an independent witness from outside the property unit, and placed in a container with the validated list attached. Each item should be accounted for, witnessed, and individually initialed.

Once this container has been filled, it should be sealed and initialed by the independent witness and a property officer. Attaching a copy of the destruction list to the sealed container and retaining it for future reference is a good practice to provide a method to later audit the items prior to destruction. The items awaiting destruction should never be documented as destroyed until the actual destruction has taken place.

Once the destruction has been completed and witnessed, the original destruction list with witness signatures should be filed, and a copy should be forwarded to the appropriate supervisor or manager for an independent record of the destruction.

In order to best document the destruction process, writing a general case report describing the destruction method, who staged the drugs for destruction, who witnessed the items being placed in the destruction container, identifying at least two persons who transported the items together (Rule of Two), who actually observed the items being burned is recommended. This case report should remain on file within the Records Bureau for the normal report retention schedule.

Standard 9.8: Drugs – Destruction Method

Standard: All drugs should be destroyed and witnessed in a manner that will totally consume the item(s) and prevent its future use.

Definition: Drugs destruction refers to the participants involved, the process that is used to prepare items ready for destruction, identify witnesses to the destruction, and fully document the action taken for a long-term history of what was destroyed, including dates and times.

Reasoning: The destruction should take place at a designated site capable of burning the items according to environmental safety rules as well as abiding by all state and federal laws. Drugs should not be destroyed by dumping in waterways, flushing down a toilet, or burying in a landfill.

Every agency's policy statement needs to specifically outline procedures for the handling, storage, transportation, and auditing of drugs for destruction. Policy/Procedures should also include requiring independent witnesses to audit the destruction, and specifying the number of armed sworn escorts to the destruction site.

Standard 9.9: Drugs - Drugs for Destruction Audit

Standard: Drugs packages should be randomly inspected prior to destruction for tampering, weight discrepancies and even perform a random qualitative analysis when practical to provide credibility and additional safeguards to the destruction process.

Definition: Drugs for destruction audit refers to the method used to determine that the drugs packages being destroyed have not had its contents substituted or removed from its packaging altogether.

Reasoning: Inspecting drugs for destruction adds an internal control to the process and discourages any illegal practices

Having an independent participant from outside the property unit's chain of command examine the packages for any signs of tampering immediately prior to destruction is an excellent internal control. Some packages may even have a random presumptive test conducted to ensure that there has been no substitution.

The person who inspects the packages should write a memo to the chief executive officer with a description of the findings. If there are signs of tampering or substitution, an internal investigation should be initiated.

IAPE STANDARDS SECTION 10 - MONEY

Standard 10.1: Money - Packaging

Standard: Money should be packaged in uniquely colored envelopes or in containers with unique labels attached. Information on the label or package should provide sufficient data to identify the case, submitting and verifying employees, persons involved, contents and money listed by denomination and total.

Definition: Money packaging refers to the manner in which money is preserved, documented, and labeled.

Reasoning: Based upon audits, direct observations, and feedback from numerous property officers, there is a significantly high error rate in money counts by booking officers. Often, these errors can be related to simple arithmetic calculations. One method to reduce this error rate is to document the number and type of coins and bills for each denomination, e.g. 3 x .25 = .75, 4 x \$1 bill = \$4.00. There should be a subtotal for each denomination as well as a total for the money within the package. Additionally, double checking the math will help to reduce the error rate.

The package or label used should have prompts that document the date and time, case number, tracking number, denominations, sum, and the signatures of the booking and verifying parties. Verification by a second party should occur regardless of the dollar amount. The package or label should contain the booking and verifying officer's name printed in a legible manner along with signatures or initials and employee number. Verification of the count is necessary to ensure that the amount of money has been counted correctly, and that a second person is responsible for both a correct count and the sealing of the money in the envelope or bag. Money should be sealed in a container that is tamper resistant and can be filed in an easily retrievable manner.

Most sums of money booked will generally fit in a 4" x 6" or even an 8.5" x 11" manila envelope, which is ideal for uniform size filing in a drawer or box. The manila envelope can be uniquely colored to provide a visual clue regarding the contents of the envelope and aids in locating items. The closing flap and seams may be sealed with evidence tape and initialed by both parties to prevent and identify tampering.

Some agencies prefer to use tamper-resistant plastic bags with similar prompts for documentation, but this option may lack color-coding. In this event, the agency should attach a uniquely colored label consistent with the color code established for other packages of money.

Standard 10.2: Money – Documentation

Standard: Money should be described in a manner that enables the reader to visualize the item without physically examining it. Additionally, the documentation should provide a record of all parties that have handled the item, storage locations, and transaction dates and times.

Definition: Documentation refers to identifying the item with a unique number, describing the item, and providing a record of all parties handling, various storage locations, along with dates and times of the transaction.

Reasoning: All money evidence should be documented in a manner that provides a thorough and accurate description and chain of custody, including: chronological documentation, paper trail, details of the seizure, custody, control, transfer, and disposition of the evidence, either paper-based or electronic.

Documentation begins with assigning an individual control number or barcode number to each money envelope. Money seized from multiple suspects should have multiple envelopes, one for each person. In a computerized system the separate control numbers may appear in one report under the case number, but the items may be individually disposed of. In a manual system, it is advisable to group all money envelopes under one report, and items of general evidence, under another report. Evidence items should always be separated from Safekeeping and Found Property by writing separate reports since the retention periods are different.

The booking officer's documentation of the money should include the subtotals by denomination, totals, the signature of the verifying employees, and dates and times.

The property room should retain a log, either manual or automated, of all monies entering and leaving the property room and the current balance. If the package is sealed and initialed there is no need to open the package for verification; however, some agencies insist that a third count by the property officer and another witness be conducted when the money enters the property room.

The desire for a count upon receipt by the property room comes from a philosophical perspective that any miscounts or thefts are easier to resolve before a lengthy period of storage time elapses. If the money is validated upon receipt in the property room by two parties, and there is a discrepancy, it can be corrected in a timely manner and the two booking officers have been excluded from any later culpability. Conversely, if the miscount is discovered five years later, anyone in the property room and the two booking officers are now part of the inquiry.

A real-time list of money items that are ready for deposit should be maintained either on paper or in a computer. This list should be itemized by case, item, amount, and running total.

Standard 10.3: Money – Documentation of Movement

Standard: Money should be deposited or transferred out of the property room as soon as practical once it no longer has evidentiary value.

Definition: Deposit or transfer refers to the movement of money from the property room into the Finance Department or a financial institution. Movement refers to a change in location.

Reasoning: Money is considered a high profile item and requires the highest level of internal controls. Documenting the person who authorized the transfer, the person who released the item, and the person who received the item along with dates and times is the preferred practice. Any time that property or evidence is released to a person, the receiving and releasing person's signature, date and time should be required.

Providing a subpoena for the court case or obtaining a supervisor's written approval provides a credible record that the money was taken out of the property room for the reasons stated.

Any time there is movement of money from the property room, there should be documentation in the form of a tickler or suspense file that notes when items are "out to the crime lab", "out for investigation", and "out to court", "out to another agency", and who is responsible for it. This tickler file will prompt the property officer to inquire regarding the item when it has not returned in a timely manner. The property officer should be required to query all signed out evidence on a periodic basis. For example, firearms, money, and drugs should be queried on the next working day.

All money that has been taken to court and not returned by the end of the court day should have a receipt signed by an officer of the court and a court stamp. The receipt should be returned to the property officer in order to update the official record.

Standard 10.4: Money - Storage

Standard: Money should be stored separately from general evidence items in a location with enhanced security.

Definition: A money storage area refers to the location where it is segregated from items of general evidence, provided with enhanced security, and is categorized by active and pending transfer designations.

Reasoning: The size of a money storage area, or vault, is defined by the quantity of money packages that an agency has historically stored. If only five or six packages are taken in each month, a cabinet or file drawer may suffice. If larger quantities are taken in, a box on a shelf in a closet might be appropriate. Larger quantities yet may require several boxes on several shelves in a designated room/vault.

Money evidence should not be commingled with any other property types, except when a common enhanced security area is shared with the storage of firearms or money. The following are recommended features for a money storage area:

- For a large agency, an interior money room, vault, or cage should be constructed of concrete block, lath and plaster, or drywall that has been reinforced with plywood or wire mesh. The room should not have suspended ceiling access from an adjacent room. Ingress should be via a solid core door equipped with a double cylinder dead-bolt keyed separately from the main property room. The room should have a separate alarm and video camera to monitor ingress and activity inside. A “rule of two” may be designed by providing the room key or combination to one person and the alarm code to another.
- A safe, locker, cabinet, or file drawer may be used for smaller quantities of money. There should be a separate padlock on a hasp to secure cabinet doors. Multiple hasps and locks may be used to design a “rule of two”, if needed. Do not rely solely on cabinet locks that can easily be defeated. A video camera to monitor activity is recommended.
- Storage shelf and bin identifiers should be consistent with the storage scheme of the main property room.
- Money from “Active” cases should be kept separate from money “Pending Transfer.” This may be accomplished by using separate shelves or boxes.
- Nothing precludes the enhanced security recommendations for firearms, money, and drugs from being combined into one common secure area with three distinct storage locations.

Other valuables, such as negotiable securities, foreign money, counterfeit bills, jewelry and precious stones should also be provided additional levels of security and documentation regarding their handling and ultimate disposition.

There may be instances when booking a sealed package of **uncounted money** may be necessary due to difficulties in accurately counting larger quantities of damaged or dirty bills. This exception should require the approval of a supervisor

or a container should be placed in the money vault or room with enhanced security as soon as practical.

Standard 10.5: Money – Storage Pending Transfer

Standard: Money pending transfer to the agency's finance department or a financial institution should always be stored in a designated area that has an enhanced level of security in the property room.

Definition: Money for transfer refers to segregating items that have been authorized for transfer from the property room.

Reasoning: Money pending transfer has the greatest likelihood of being pilfered from storage. Storing money in a locked room, safe, sealed container, secured locker, or locked file cabinet provides an enhanced level of security. This segregation may occur in the same room as active drugs and firearm cases.

Additionally, storing money pending transfer in an area away from active money provides a method to better track and visually monitor the quantity of money awaiting transfer.

The department's policy should define a threshold that will trigger the transfer. A threshold may be based upon the calendar, for example, weekly or monthly. A threshold may also be based upon quantity, such as every \$2,000. Thresholds make all parties in the transfer process accountable and ensure that the process occurs before the money becomes a target of theft.

Standard 10.6: Money – Disposition: Release

Standard: All releases of money should be authorized in writing by the investigating officer to the custody of a specific person, or other agency, and appropriately documented.

Definition: A money release refers to the return of money to the rightful owner, designee, finder, or transfer to another agency or court.

Reasoning: All releases of money should be specifically authorized in writing by the investigating officer. The receiving party should present valid government issued picture identification to match against the authorized name listed by the investigating officer.

A second person should be present when opening the money package to witness the transaction, or the release should be done under a recording surveillance camera to document the count and release of the money. The receiving party should also sign the property release to acknowledge the receipt of the specified

amount. The final record should be accompanied with the signature, date and time of the release.

Standard 10.7: Money – Disposition Transfer to Finance

Standard: All transfers of money to Finance or a financial institution should be specifically authorized in writing by the investigating officer or prosecutor. Policy should define the process in which inactive money is to be transferred from the property room as well as a threshold for the transfer to occur.

Reasoning: Money should be deposited with the agency's finance department or a financial institution as quickly as possible after the assigned investigator signs an authorization for transfer. The goal should be to remove money from the property room as soon as practical to reduce the potential for theft or being misplaced.

When money is transferred from the property room to the Finance Department or a financial institution, a transfer list should identify the sum for each case number that comprises the total deposit amount. A query of the money disposition on a specific case should reveal a clear paper or electronic trail as part of the deposit.

Standard 10.8: Money – Disposition Asset Forfeiture

Standard: Departmental policy should provide protocols to be followed when money associated with potential asset forfeiture is seized. The protocols should direct that money evidence connected with an asset seizure should be booked into the property room and subsequently deposited into a designated account in a financial institution as soon as possible.

Definition: Criminal enterprise asset forfeiture refers to the civil action against money or property seized that was gained as a result of criminal activity.

Reasoning: Large sums of money should be deposited into a financial institution as soon as practical to remove the target of theft from the property room. The transfer of asset seizure money from the law enforcement agency to the prosecutor's office should be accomplished via check, money order, bank check so that there is a clear paper trail as to the transfer of the money.

Arrangements should be made for the money to be counted at a financial institution, with two witnesses, on the next bank day. Once the count has been verified by two witnesses, the money should be deposited into the financial institution. Transfer of the money to the prosecutor's office should be accomplished in accordance with local, state, or federal asset forfeiture guidelines. A copy of the asset forfeiture application, the container in which the money was seized, the evidence envelope which contains the amount of the

seizure (broken down by denomination, and the signature is of the individuals who validated the count should all be booked into the property room as evidence.

A copy of the forfeiture application, money container and the evidence envelope with signatures and count, by denomination, should then be booked into evidence as another case exhibit showing the chain of custody.

IAPE STANDARDS SECTION 11 – FIREARMS

Standard 11.1: Firearms – Packaging

Standard: Firearms should be packaged in a manner that protects the employee, protects the evidentiary value of the item, and permits efficient storage. Safety of employees must be a priority.

Definition: Packaging refers to the container used to safeguard the firearm, trace evidence, and permit appropriate labeling of the firearm.

Reasoning: Firearms need to be packaged in a manner that easily identifies the item as a firearm, in addition to providing a container that safeguards the evidence from contamination and ensures the packaging provides the highest level of safety for employees.

A good practice to prevent a loaded firearm from being submitted to the property room is to insert a nylon safety tie through the action or cylinder when feasible. The tie should not be inserted through the barrel as it may alter the barrel markings. Any proposed policy to this effect should be reviewed by the crime lab in use to satisfy any forensic objections.

Firearms may be stored in a variety of containers, such as gun boxes, gun bags, kraft paper, Tyvek bags, paper bags, or manila envelopes. Some agencies elect to not package their firearms at all.

Any container used for the storage of firearms should protect the safety of the employee from biohazardous substances, such as bloodborne pathogens.

The firearm should also be protected in its packaging from the loss of evidentiary value by protecting any trace evidence present from cross-contamination or unintentional obliteration.

Selecting the correct method of packaging can greatly impact the effectiveness of storage and retrieval of firearms.

A firearm placed inside a gun box should be secured with nylon tie wraps, zip ties, or cable wraps, after it has been safety checked for being unloaded.

Boxes and bags should generally not be reused if the cross-contamination of trace evidence from a previous use may be an issue in the new case.

The exterior of the container should have color-coded labels to indicate if the firearm has been contaminated with biohazards, or if it had been used in a homicide, officer-involved shooting, found property, safekeeping, or any other special issue.

Each department should develop a policy that provides guidance on the submission of live ammunition. Some agencies chose to place ammunition separately inside a gun box, while other may chose to book and store it separately. Note: placing ammunition inside a gun box may deem the firearm to be loaded under certain state's statutes. This is an important distinction if the firearm is ever transported or handled by civilians.

Standard 11.2: Firearms – Documentation

Standard: Firearms should be described in a manner that enables the reader to visualize the item without physically examining it. Additionally, the documentation should provide a record of all parties that have handled the item, storage locations, and transaction dates and times.

Definition: Documentation refers to identifying the item with a unique number, describing the item, and providing a record of all parties handling, various storage locations, along with dates and times of the transaction.

Reasoning: All firearms evidence needs to be documented in a manner that provides a thorough and accurate description and chain of custody including, chronological documentation, and/or paper trail, showing the seizure, custody, control, transfer, analysis, and disposition of evidence, physical or electronic.

Documentation begins with assigning an individual control number or barcode number to each firearm. Magazines and 'scopes generally do not require separate documentation if they are attached to the firearm and described in the report. In a computerized system the separate control numbers may appear in one report under the case number, but the items may be individually disposed of. In a manual system, it is advisable to group all firearms under one report, and items of general evidence, such as ammunition under another property report. Evidence items should always be separated from Safekeeping and Found Property by writing separate reports since the retention periods are different.

Documentation of the firearm should include a full description including the make, model, caliber, type, and serial number. The booking officer should cause the firearm to be queried through NCIC and any state databases to determine the status and history, if known. A good practice is to provide the NCIC or state computer printout to the property room. The property officer should verify the

accuracy of the serial number information by comparing the serial number on the firearm against the paperwork.

Standard 11.3: Firearms – Documentation of Movement

Standard: High profile evidence such as firearms, money, and drugs leaving the custody of the agency should have the most stringent internal controls to ensure the integrity of the evidence.

Definition: Movement refers to the temporary transfer of a firearm to any external location, such as court, crime lab, other agency, or out for investigations, and its return.

Reasoning: Firearms are considered a high profile item and require extra internal controls that provide a transparent chain of custody. Documenting the person who authorized the transfer, the person who released the item, and the person who received the item along with dates and times is the preferred practice. Any time that property or evidence is released to a person, the receiving and releasing person's signature, destination, date and time should be required.

Providing a subpoena for the court case, or obtaining a supervisor's written approval provides a credible record that the firearm is being taken out of the property room for the reasons stated.

Any time there is movement of firearms from the property room, there should be documentation in the form of a tickler or suspense file that notes when items are "out to the crime lab", "out for investigation", and "out to court", and who is responsible for it. This tickler file will prompt the property officer to inquire regarding the item when it has not returned in a timely manner. The property officer should be required to query all signed out evidence on a periodic basis. For example, firearms, money, and drugs should be queried on the next working day.

All firearms that have been taken to court and not returned by the end of the court day should have a receipt signed by an officer of the court and a court stamp.

Standard 11.4: Firearms - Storage

Standard: Firearms should be stored separately from general evidence items in a location with enhanced security.

Definition: Regardless of the size needed, a firearm storage area should to be designed in a manner that it is separate from general evidence, provides enhanced security, environmental safety, and easy retrieval.

Reasoning: The size of the firearm storage area needed is dependent upon the quantity of firearms anticipated needing storage. A small agency may only need a locker; a medium size agency may need a closet or cage, while a larger agency may need an entire room.

Firearm evidence should not be commingled with any other property types, except when a common enhanced security area is shared with the storage of drugs or money. The following are recommended features for a firearm storage area:

- A firearm room, closet, or cage should be constructed of concrete block, lath and plaster, security screen, or drywall that has been reinforced with plywood or wire mesh. The room should not have suspended ceiling access from an adjacent room. Ingress should be via a solid core door equipped with a double cylinder dead-bolt keyed separately from the main property room.
- A locker, cabinet, or locking shelves may be used for smaller quantities of firearms. There should be a separate padlock on a hasp to secure the doors.
- Any room or area that maintains firearms should have a separate alarm and video system to monitor ingress and activity inside.
- If necessary, a “rule of two” may be designed by providing the room key to one person and the alarm code to another
- Storage shelf and bin identifiers should be consistent with the storage scheme of the main property room.
- Firearms from “Active” cases should be kept separate from firearms “Pending Destruction.” This may be accomplished by using separate shelves.
- Nothing precludes the enhanced security recommendations for firearms, money, and drugs from being combined into one common secure area with three distinct storage facilities.
- Rifles and shotguns should be placed in racks or in rifle boxes to permit a consecutive and systematic filing system. Any firearm, with or without a container should be filed on the shelf in a consecutive and systematic manner using the case or control number.
- Using gun boxes allows the rifle and handgun boxes to be stored on edge to permit easy retrieval. Use additional shelves if necessary; vertical clearance between shelves should be little more than the height of the box to avoid wasting space. Avoid stacking boxes one on top of another

to eliminate moving multiple boxes during retrieval. Not all long guns will fit in boxes, therefore an area for oversized handguns and long guns should be made available.

- Firearms from active cases should be in one location, and firearms pending destruction should be in another.

Standard 11.5: Firearms – Storage Pending Destruction

Standard: Firearms pending destruction should always be stored in a designated area that has an enhanced level of security in the property room.

Definition: Firearms pending destruction security refers to the area where firearms are maintained prior to the actual destruction.

Reasoning: Firearms pending destruction have the greatest likelihood of being pilfered from storage. Storing these items in a locked room, secured locker, or locked cabinet provides an enhanced level of security.

Additionally, storing firearms for destruction in an area away from active evidence provides a method to better track and visually monitor the quantity of firearms pending destruction.

Policy should define a threshold when firearms that are pending destruction should occur. A threshold can be based upon the calendar, for example, twice a year. A threshold may also be based upon quantity, such as every 50 firearms. Thresholds make all parties in the destruction process accountable and ensure that the process occurs before the firearms become a target of theft.

Standard 11.6: Firearms – Disposition/Release

Standard: All releases of firearms should be specifically authorized in writing by the investigating officer to the custody of a specific person or agency.

Definition: Disposition and release refers to the return of a firearm to the rightful owner if he/she is not restricted from possessing a firearm.

Reasoning: Due to the inherent risk of firearm misuse, a firearm should only be released to its owner after this person has demonstrated that they are not prohibited from possessing a firearm pursuant to federal or state laws. A prior history of domestic violence, mental instability, or conviction of certain crimes may prohibit the person from possessing a firearm. Improper release of a firearm to a person that is prohibited has tremendous potential liability if the firearm is used in a crime.

This responsibility for checking the status of claimants should be assigned to one person in the agency, who has been thoroughly trained in gun laws and interpreting criminal histories. The authorization to release must bear the signature of the person authorizing the release.

In the event that the owner of a firearm is NOT permitted to take possession, department policy may enable the firearm's ownership to be transferred by the owner to or by a federally licensed firearm dealer in lieu of being destroyed.

The actual release should be thoroughly documented with a signature of the person physically releasing the firearm, a copy of government issued ID and signature of the owner accepting the firearm, and a photo of the release.

Policy should ensure that NCIC and state computer databases are updated accordingly any time a firearm is released to prevent a legitimately released firearm from remaining listed as stolen.

Consider releasing ammunition pertaining to a released firearm on a different day to avoid providing a potentially loaded firearm in the station.

Standard 11.7: Firearms – Disposition/Diversion to Agency Use

Standard: The diversion of firearms for official use of the agency should be memorialized by policy, or codified by local ordinance or state law.

Definition: Firearms that have no rightful owner, or have been approved for destruction, may be retained by the law enforcement agency for public agency use pursuant to local laws.

Reasoning: The diversion of firearms for agency use is generally an acceptable practice for transferring ownership of the firearm for departmental use. The diversion process should include a justification memo from the requesting party, approval from a manager, and approval from the Chief Executive Officer or agency designee. To add an additional level of transparency to the process, consider having an official from outside the agency - such as a purchasing administrator or a court magistrate approving the request.

Documentation of the diversion process should be maintained by the property unit and the division commander. The diverted firearm should be included on the agency's equipment inventory for audit purposes and transparency.

Standard 11.8: Firearms – Disposition & Sale or Trade

Standard: The sale or trade of firearms by an agency should be memorialized in policy, or codified by local ordinance or state law. The sale of a firearm to an employee should be carefully documented and transparent.

Definition: The exchange of firearms that have been diverted for public agency use to a licensed firearm dealer for cash or in-kind goods.

Reasoning: Firearms are generally traded for new firearms or other equipment as a way to purchase new equipment without using budget resources. The sale or trade of firearms has many risks, liabilities, and potential ethical problems. It is customary for the proceeds of any auction or sale to go to the governing body's general fund to avoid the appearance of any direct conflict of interest.

There is a potential for abuse any time there is a direct connection between the law enforcement agency and the sale or trade of surplus firearms. There may be an incentive NOT to find the rightful owner of property if the sale proceeds go directly to the agency.

Once due process for ownership is complete, the Chief Executive Officer should obtain a resolution from the governing body instructing the law enforcement agency to proceed with the sale or trade. This resolution will help to share any responsibility and negative publicity in the event that a firearm is subsequently used in an unlawful manner.

The sales of firearms to employees should be discouraged as some persons may interpret the action as providing preferential treatment that is not available to the general public. If a sale is made regardless of objections, ensure that the transfer is made through a federally licensed firearms dealer.

Standard 11.9: Firearms - Destruction Documentation

Standard: Destroyed firearms should provide transparent documentation that identifies all personnel involved in the destruction process and ensures that an independent witness is able to validate that each and every firearm was destroyed.

Definition: Destruction documentation refers to the memorializing of the destruction process to provide a transparent and verifiable chain of custody and final disposal.

Reasoning: Firearms pending destruction have the greatest likelihood of being pilfered from storage or during transportation to a destruction site, as there is generally no longer any interest in the item for prosecution or release. As a result, there is a need for thorough documentation and verification of every step in the

destruction process to leave no room for doubt or suspicion as to its final disposition.

Maintaining a running firearm destruction list that includes the case number, item number, tracking number, defendant's name and an accurate description of each item enhances the integrity of the process.

Once the firearms are authorized for destruction and have been listed, they should be staged, verified by an independent witness, and placed in a sealed container with the validated firearm destruction list attached. Each item on the list should be individually initialed, and witnessed.

The documentation should include: who authorized the firearm for destruction, who staged and verified the item on the destruction list, who transported the firearms to the destruction site, and who witnessed and verified each individual firearm being destroyed.

Attaching a copy of the destruction list to the sealed container is a good practice to provide a method to later audit the items prior to destruction. The items awaiting destruction should never be documented as destroyed until the actually process occurs.

Once the destruction has been completed and witnessed, the *original* firearm destruction list with witness signatures should be filed, and a copy should be forwarded to the appropriate supervisor or manager for an independent record of the destruction.

In order to best document the destruction process, writing a general case report describing the destruction method, who staged the firearms for destruction, who witnessed the items being placed in the destruction container, who transported the items, and who actually observed the items being destroyed is recommended. This case report should remain on file within the Records Bureau for the normal report retention schedule.

Standard 11.10: Firearm – Destruction Method

Standard: All firearms should be destroyed and witnessed in a manner that will totally demolish the item to prevent its future use.

Definition: Firearm destruction method refers to the method or process that is used to render the firearm unusable.

Reasoning: Firearms should be destroyed to prevent its illegal use at some time in the future. Different agencies may use different methods of rendering firearms unusable. Some agencies may chose to burn, chop, melt, or crush firearms as a method of rendering them unusable. The burying of firearms in a landfill is only

acceptable when the firearm has been previously rendered unusable. Agencies that strip parts from firearms for official use should still ensure that the portion of the frame containing the serial number cannot be reused, and that a court order permits non-serialized parts to be recycled for public use.

IAPE STANDARDS SECTION 12 – FOUND PROPERTY

Standard 12.1: Found Property – Reporting Policy

Standard: Departmental policy should instruct all personnel that a numbered case report or other easily retrievable document is required whenever Found Property is turned over to, or found by any employee.

Definition: A numbered found property report should be searchable by day, date, time, location, article, and reporting employee.

Reasoning: Found property may consist of item(s) that are lost or misplaced by the owner, or it may be item(s) that are evidence of criminal activity that has not been reported. Forwarding a copy of the found property report to the investigation division may link the found property to a crime.

It is important that basic information is documented identifying the finder:

- if known, the description of the item(s), the location where the item(s) was found
- date and time the item(s) was found
- when it was turned over to agency personnel
- whether or not the finder is interested in claiming the item(s) if the owner is not located

Failure to properly report found property could result in items not being returned to the rightful owner, or it could lead a finder to believe that the items were misappropriated for personal use by a department employee.

The statute or municipal code that governs “found property” should be cited within the departmental directive. The directive should also specify the minimum amount of time that the department is responsible to hold the found property. In the event that there is neither statute nor code governing "found property" the department should consider establishing a policy and procedure related to this topic.

Department policy should provide guidance on the protocols for returning found firearms.

Standard 12.2: Found Property – Receipt

Standard: Departmental policy should instruct all personnel that when a citizen turns found property over to departmental personnel, that the finder be given an official department receipt that provides direction on how to claim the property and cite any legal requirements.

Definition: A Found Property Receipt is a form that is given to the finder that describes the found item and provides guidance on how to legally claim it if the owner is not found.

Reasoning: Providing the finder of property with a receipt on how to claim an item may reduce many inquiries to the department. The receipt should provide a brief description of the property, the case number, a phone number of who to call with questions, any legal requirements, the statute numbers, and a signature block where the finder acknowledges they received and understand the process if they wish to claim the property. A two-part form, with one part accompanying the property, and the other provided to the finder should be provided.

Standard 12.3: Found Property – Storage

Standard: Found property should be segregated from items of general evidence and clearly labeled as found property.

Exception: Found property consisting of firearms, money, and **drugs** should be stored with other high profile items with enhanced security, but still clearly labeled with a distinctive tag as Found Property. Large or bulky items may also be stored in the bulky storage area if clearly labeled with a color-coded tag.

Reasoning: Found property is generally required to be held for a specified short period of time while attempts to locate the rightful owner are made.

Due to the short-term nature of Found Property storage, the location of these storage shelves should be where it is more convenient to frequently access than other items of general evidence. Generally speaking, there should be no items on the Found Property shelves that exceed the minimum statutory requirements or departmental policy.

Standard 12.4: Found Property – Investigation

Standard: Departmental policy should assign responsibility for attempting to locate the rightful owners of found property.

Definition: Assigned responsibility refers to whom the investigative duties are assigned

Reasoning: Departmental policy should define who is responsible for conducting any follow-up investigations to locate the owner of found property. The reason for assigning responsibility is to ensure that a good faith attempt to locate the rightful owner is made, and not overlooked.

Assigning this responsibility to the property officer is an acceptable practice. The complexity of the investigation or the nature of found property may determine if the property officer needs to collaborate with a detective.

Standard 12.5: Found Property – Release

Standard: Any time found property is released to the owner, finder, or designee; a release form and signature should be obtained from the person claiming the property.

Definition: A release refers to returning found property to the rightful owner, finder, or designee.

Reasoning: Obtaining a signature on the property record from the owner, finder, or designee with appropriate identification may insulate the agency and its employees from any false accusation of theft or mismanagement. Scanning the ID into a computer database, or obtaining a photocopy of the ID should be part of the release process.

Standard 12.6: Found Property – Disposition

Standard: Found Property should be released to the rightful owner or designee, claimed by the finder, or disposed of according to statute or departmental policy.

Definition: Disposition refers to the sale of unclaimed property at auction, the diversion to the agency for public use, or the transfer of ownership to another individual or agency.

Reasoning: When the rightful owner of found property cannot be determined, the finder may claim the item pursuant to statute or departmental policy. If the finder declines to claim the property, it may be diverted for public use by the agency or sold at auction. The final disposition of the found property should be documented as part of the permanent case file.

If the rightful owner of property is contested and cannot be determined, consult with the agency's legal counsel. Failure to release the property to the rightful owner may result in legal action.

IAPE STANDARDS SECTION 13 – PROPERTY FOR SAFEKEEPING

Standard 13.1: Property for Safekeeping – Reporting Policy

Standard: Departmental policy should instruct all personnel that a numbered report is required whenever Property for Safekeeping comes into the custody of an employee.

Definition: A Property for Safekeeping report or other retrievable document should be searchable by day, date, location, article, and reporting employee.

Reasoning: Property for Safekeeping may consist of personal property item(s) that need safeguarding as a result of the owner's infirmity, accident, or arrest. The Property for Safekeeping report or property record should be separate from any related crime or accident report because the disposition of property held as safekeeping may be conducted much sooner than evidence in a criminal case.

Some states permit the disposition of unclaimed personal property after a specified period of time. Consider enacting a department policy in the absence of a local resolution, ordinance, or state guidelines.

Consider providing written notice to arrestees at the time of booking that Property for Safekeeping will be disposed of pursuant to departmental policy within a specified time unless claimed prior.

Standard 13.2: Property for Safekeeping – Receipt

Standard: Departmental policy should instruct all personnel that anytime personal property (Property for Safekeeping) is taken from a citizen that the owner is given a department authorized receipt with information on how to claim the property

Definition: A Property for Safekeeping Receipt is a document that is given to the owner that defines how to retrieve their property.

Reasoning: Providing the owner of property with a receipt on how to claim the item may reduce many inquiries to the department on how to claim their property. The receipt should provide a brief description of the property, a date the property will be available, case number, phone number of who to call with questions, any legal requirements, the statute numbers, and a signature block where the finder acknowledges they received the property and understands their obligations to claim it. Completing the receipts in duplicate is encouraged, as it can provide both the owner and the property unit a copy of the document.

Standard 13.3: Property for Safekeeping – Storage

Standard: Property for Safekeeping should be segregated from items of general evidence and clearly labeled as Property for Safekeeping.

Exception: Property for Safekeeping consisting of firearms, money, and prescription drugs should be stored with other high profile items with enhanced security, but still clearly labeled as Property for Safekeeping. Large or bulky items may also be stored in the bulky storage area if clearly labeled.

Reasoning: Property for Safekeeping should be considered a short-term item that in most cases doesn't have to be retained as long as any evidence from the same case.

Due to the short-term nature of Property for Safekeeping storage, the location of these storage shelves should be where it is more convenient to frequently access than other items of general evidence. Generally speaking, there should be no items on the Property for Safekeeping shelves that significantly exceeds the minimum specified time requirements that may be determined by statute or policy.

Standard 13.4: Property for Safekeeping – Disposition

Standard: Property for Safekeeping should be released to the rightful owner or disposed of according to departmental policy as quickly as practical.

Definition: Disposition refers to the release of the property to the owner or designee, sale of unclaimed property at auction, the diversion to the agency for public use, or release to an other authorized entity, or destruction and disposal.

Reasoning: The department has an obligation to return a person's personal property to them as quickly as possible. In an arrest situation always attempt to return the Property for Safekeeping prior to the adjudication of the criminal case to free up storage space. If the owner of the property is incarcerated, he/she may complete a written and notarized authorization form that authorizes a friend or relative to retrieve the property.

IAPE STANDARDS SECTION 14 – DISPOSITION

Standard 14.1: Disposition – Review

Standard: Law enforcement agencies should have a systematic review process assuring that each item of property and evidence is evaluated for possible purging on an annual basis.

Definition: Review is the assessment of whether an item may be removed from the inventory based upon an elapsed period of time, or completion of all legal and departmental mandates.

Reasoning: There is no procedure more important to keeping the inventory of a property room at a manageable level than an effective on-going purging program. The property room inventory should be kept free of items that are no longer needed in order to avoid the need for additional storage space and staffing.

The timely and appropriate disposition of property is extremely important to the efficient management of the property room. Overcrowded evidence rooms generally require more staffing to manage simply because the size of their inventory has a tendency to slow down routine operations involving evidence storage and retrieval.

Methodology: Types of Systems

In order to establish an effective purging system, certain criteria must be established to provide guidance in how long property and evidence should be retained before being reviewed.

Statutes of Limitation:

The most common review system used in property rooms utilizes the statutes of limitations as a review date. For example, if the time limit for a misdemeanor were one year, the assigned detective or arresting officer would receive a “Review Notice” after one year. Each agency should utilize the statutory requirements for their own respective state.

In felony cases, the review should be sent out to the investigating officer when the statutes of limitations have expired. In most states, the statutes of limitations for felony crimes is generally much longer than misdemeanors, making the retention and review period for these serious crimes proportionally longer. An important factor in making a purging system work effectively is to apply the various statutes of limitations to cases where evidence is being retained. The review notice should request approval to release, dispose of or retain the property or evidence.

Here are factors to consider in setting review dates based upon the statute of limitations for each particular state. In many states there are fixed periods of time after which prosecution on specified types of crimes can no longer be initiated. In

some states the time limit is absolute, in some it does not start until a suspect is identified, and in some it is extended by the length of time that the suspect is out of state during the statutory period. In many states, the limitation no longer applies once a warrant is issued for the suspect, as long as the agency can show due diligence in attempting to serve the warrant.

Accelerated Review:

The accelerated review is similar to the Statutes of Limitation system, but the review dates may be reduced to a much shorter period of time. For example, a misdemeanor case may have a review date at six months instead of one year. Felonies may be reviewed in one year instead of three.

The review date is not a purge date, it's only a date to reassess the evidence and inquire whether the case has already been adjudicated, and whether or not the evidence can be disposed of. This process may be riskier because evidence could be disposed of prior to the Statute of Limitations expiring, thereby limiting prosecution.

Departments that implement an accelerated review often see a large proportion of the items forwarded to the detective are in fact signed off for release or destruction before the Statute of Limitations has expired.

Administrative Kill Policy:

A department whose inventory is completely out of control and lacking any staff to research all of the cases may consider utilizing an "Administrative Kill" policy. The Administrative Kill is the riskiest, but sometimes the only alternative to address the problem in a timely manner.

The Chief Executive Officer of the agency should initiate the Administrative Kill Policy with a written executive order to dispose of certain categories of evidence. This order should be specific as to the classifications of evidence covered, e.g. "all misdemeanors over 'X' months old, without a related arrest warrant, will be destroyed/released." Another example of a written kill policy would be, "designated felony property crimes that are beyond 'X' period of time and which will never be investigated."

Special attention should be given to prevent the "Administrative Kill" of any evidence in crimes against persons and sex related crimes. These could become both a political liability as well as a civil tort against the investigator, the agency and the umbrella organization. For this reason, the prosecutor should also review any "Administrative Kill" requests.

With recent advances in DNA technology, many states have adopted statutes that require a specific length of time that biological evidence must be retained. Department policies should ensure adherence to these statutes.

After establishing the time limits that are most suitable for the department, a system needs to be developed to add a review date to every item of evidence.

Some type of review form or memorandum should be used by the property unit to notify an investigating officer when a case is due for review. The form should include check boxes to differentiate items to be released, disposed of, or retained. The investigating officer should be required to sign the form for accountability purposes, and state why it should be retained. A supervisor should approve whenever evidence is retained beyond the respective statute of limitation. A schedule for re-review, or a second review within a year, should be set for property or evidence that is labeled as “retained.”

The purging process can best be accomplished by requiring an annual review by the assigned case investigating officer. The most efficient process is for the property room to generate a review notice requiring the investing officer to evaluate each case for potential purging. When the property unit does not initiate the review process, departmental policy should define who is responsible, and when the review should occur.

There should be special consideration given to NOT disposing of certain evidence without prosecutorial or judicial review, such as: sex crimes, capital crimes, other serious felonies, and pending civil litigation.

Standard 14.2: Disposition – Authority to Purge

Standard: The final authority to purge evidence from the property room should be reviewed and authorized by the investigating officer. In some jurisdictions this process may also require additional approval from the prosecutor or the court. Department policy should establish whether the authorization for the purging of Found Property and Safekeeping might be delegated to the property officer.

Definition: Authorization to purge refers to the process by which evidence from a case is reviewed to determine if it has potential evidentiary value. If not, the approval may be granted to dispose of the item(s).

Reasoning: The authorization to purge and dispose of evidence should be reserved for the investigating officer, and in some states the prosecutor, and courts. The investigating officer may be the only person who has specific knowledge that the evidence may be related to another case; therefore, it is imperative that the assigned case investigator be the approval process.

In general, the property officer should not be making final decisions on the disposition of evidence. The property officer should be considered the guardian of the items and not the decision-maker of its final disposition. Such procedures provides for a good internal control by separating responsibilities and duties

Homicide evidence is generally held for extended periods of time due to the statutes of limitations being open-ended and a lack of policy that governs its retention.

Absent any statute which requires otherwise, there are times when even homicide evidence may be eligible for being purged from the property system, such as when:

- suspect has completed sentence
- suspect died in custody
- all appeals have been exhausted
- suspect waives right to retain evidence

In any homicide or manslaughter case, departmental policy should require some type of periodic review to determine if the case has been adjudicated, and whether or not the evidence is eligible for final disposition. Policy should require that all such cases should be approved by the investigating officer in conjunction with the prosecutor. In cases where evidence has been seized pursuant to a search warrant, court approval may be necessary.

Due to the nature of recent post-conviction appeals, some states' statutes are requiring that biological evidence be retained beyond the death of the defendant, and, in some cases "forever". It is incumbent upon each agency to be aware of the applicable statutes in this area and adhere to them.

Suicide evidence is unique in its potential for being reclassified as a homicide if new evidence is discovered. Any suicide evidence that is reviewed for possible purging should be considered on a case-by-case basis.

Standard 14.3: Disposition – Release to Owner

Standard: All property or evidence releases should document who authorized the transfer, who actually released the item, full description of the item, and complete identifying information of the person receiving the item.

Definition: A "release to owner" refers to the return of property or evidence to its rightful owner or designee.

Reasoning: The investigating officer should inform the property room in writing, giving specific instructions to whom **specific items** should be released. Department policy should designate who is responsible for sending or making such notification to the owner.

All release notices should have some type of "drop dead date" to initiate action if there is no response within a specified period of time. All notifications made

should be documented in the property record in order to “start the clock” on any length of time provided for a response.

All releases should be signed by the receiving person along with other personal data, such as, address, phone, and government issued photo ID. In addition, a photograph of the person while receiving the article should be considered when items of high value are released. The signed release should be attached to the paper evidence record, or electronically as an attachment to the item record. The purpose of this procedure is to counter any future claims and/or allegations regarding the release of the items.

In agencies that have an automated tracking system, it may be possible to have the signature captured on an electronic signature pad, a government ID card scanned, and a digital photo attached to the file for complete documentation.

Standard 14.4: Disposition - Auctions

Standard: Law enforcement agencies should develop policies for auction sales of property that is consistent with state and local laws.

Definition: An auction is public sale where items are sold to the highest bidder.

Reasoning: Most local codes require the selling of unclaimed and surplus property at public auction. Department policy should designate who is responsible for evaluating what property is to be auctioned, and what property should be destroyed.

Agencies may choose to conduct in-house public auctions, contract with an auction company to conduct an auction, or utilize an online auction company. In-house auctions require the use of storage space for items pending auction, while outside auctioneers will routinely pick-up items at the department’s request. All proceeds from auction sales should be deposited in the umbrella agency’s general fund to avoid a potential conflict of interest. Requests for future funds may cite offsetting revenue from auction sales as justification, thus enhancing transparency.

More people are likely to bid on items at a professional auction or online service often resulting in a higher return than an in-house auction. The goal of the auction should not necessarily be to garner the greatest return for the city or county, but should be to control the property room’s inventory and recapture needed space.

The property unit managers should thoroughly familiarize themselves with the specific state and local statutes regarding the sale of property. Policy should prohibit any departmental employees from bidding on auction items due to the appearance of, or an actual conflict of interest.

Standard 14.5: Disposition - Diversion

Standard: Law enforcement agencies should develop written policy and procedures that enable the diversion of unclaimed property for public use.

Definition: Diversion is the process by which a public agency may transfer ownership of unclaimed property in its possession for public use. Law enforcement agencies may generally divert property for public use when the rightful owner is either unidentified, or has failed to claim the item within a designated time frame.

Reasoning: Most states provide statutory approval to transfer unclaimed property for city, county, or state use. If there is no authorizing state statute applicable, the development of a municipal or county ordinance may legally permit the process and insulate the agency from any civil litigation.

Agencies should have a written policy and procedures to guide department personnel on the requirement to divert the requested property. The procedures should include a request for the retention of a specific item and the justification should originate with the person in charge of the area where the item is to be used. The approval process should include approval by the requesting person's direct chain of command, including the Chief Executive Officer or designee.

Once the departmental approval process has been completed, consider including a third party approval from outside the agency for items of designated value. This could be the city or county's Purchasing Director, City Manager, County Executive, Mayor, or any other disassociated official. The property unit should maintain a permanent record of all property diversions. Refer to Standard 11.7 for the diversion of firearms.

Use of any property so retained must be for official purposes only; the practice of allowing employees to retain property for personal or non-governmental purposes should be prohibited.

Standard 14.6: Disposition - Destruction

Standard: Evidence items that are not released to owner, diverted for government use, or sold at auction should be destroyed.

Definition: Destruction is the act of breaking apart, melting, crushing, or making an item of property unusable prior to discarding.

Reasoning: When property has been authorized for destruction it should be rendered unusable and placed in a secure holding area until it is transported to the disposal site. This action prevents the items being removed from the trash for personal gain. Having a witness to the destruction of items that are of a sensitive nature, such as pornography, for instance, is always a good idea.

Recycling of component materials, batteries, metals, plastics, glass, paper, and electronics is the preferred method of disposal.

Items consisting of drugs and firearms require specialized destruction techniques to guarantee the items cannot be retrieved and used illegally. Refer to Standard 11 for destruction of firearms and Standard 9 for the destruction of drugs.

IAPE STANDARDS SECTION 15 – INTERNAL CONTROLS

Standard 15.1: Inventories

Standard: An inventory is a critical internal control and should be conducted annually, or whenever a change in key-holding personnel or in the Chief Executive Officer is made.

Definition: An inventory is the process of individually checking all or a specified portion of the property/evidence items against the agency's records.

Reasoning: The purpose of an inventory is to ensure that all items of property/evidence are accounted for. A complete inventory involves matching each piece of property or evidence with its corresponding documentation.

Conducting annual inventories will identify property or evidence that is missing or misplaced from its assigned location, and it will identify items that are present in a particular location that should have been previously removed.

Routine inventories will limit the time frame for investigating missing items. Without a timely inventory the time frame of an investigation and the total number of persons involved will expand significantly. Additionally it is unfair to burden a new employee, supervisors, or managers with responsibility for items that may have been misplaced, lost, or stolen prior to his/her assignment.

Agencies that conduct regular inventories are far less likely to experience an internal loss of property or evidence.

In agencies where the size of the property unit inventory is so large as to prohibit the complete inventory of the facility at one time, a plan should be developed which requires an inventory of specific locations on scheduled basis. For example, if 10% of the locations were inventoried each month, a complete inventory could be accomplished annually. Additionally, the inventory of guns, money and drugs should be done more often. It is suggested that these three high-risk categories of property or evidence be accounted for several times within a calendar year.

Methodology: When conducting an inventory, the persons accounting for individual pieces may encounter sealed packages that are labeled to contain multiple items. It is not necessary for each package to be opened, but only to compare the package label with the associated paperwork or computer record. If the package appears to have been opened or tampered with, further examination is in order.

Computerized systems with barcodes and scanners:

The most efficient method of conducting an inventory is with the use of barcodes, a barcode scanner, and appropriate inventory software. In order to conduct a thorough and accurate inventory, the barcode must represent only one specific item, and not the contents of a package containing multiple items. If there are multiple items within a package and each item has its own barcode, it is recommended that a duplicate barcode for each item be placed on the exterior of the package. This method enables the inventory of all items within the package as well as facilitating the release or transfer of just one of the items within the package.

Once all the items in a location have been scanned, the software should compare what is physically present with the computer record. Properly designed software should provide an exception report that lists items that are missing and items that are present that don't belong in that location. An archived list of the items on the shelf during the inventory should be retained for future reference.

Computerized systems, without barcodes or scanners:

In those agencies that have an automated tracking system but no ability to use barcode scanners, the property officer can print a list of all items in a specific location. A comparison of the printout against what is actually in each designated location should be conducted and the outcome as well as the list should be retained for future reference, i.e. if property or evidence is found missing in the future.

Manual, paper-based system, with *separate* active and inactive records:

Active records represent items that should be in the current inventory, while inactive records represent items that should have previously been removed.

In order to conduct an inventory in a manual system where all the active items are filed *separately*, the preferred method is to list all of the items located in a particular location. This list of items is then reconciled with the property records in the active files.

In the event that a sealed package contains numerous items under one case number, compare the tracking number (case or control number) with the property record in the file. It may not be possible to reconcile each item without opening the package for inspection. The decision to open sealed packages should be determined by management. If it is determined that a package must be opened for inventory purposes, it is recommended that the agency have a written procedure which provides step-by-step guidance to be followed as well as the documentation of the actions. This is important in the event of a challenge regarding the chain-of-custody during a trial or hearing

Manual paper-based system, with commingled active and inactive records:
In the event that active and inactive records are commingled in one file or file drawer, the inventory process becomes arduous and labor intensive due to the need to search through all records for one specific record to be reconciled. Therefore, it is recommended that active and inactive records should be filed separately.

Any items identified as missing should be brought to the attention of a supervisor/manager in writing as soon as practical. Depending on the value (both evidentiary and monetary) and circumstances of the missing item, a determination by the supervisor/manager should be made whether or not to initiate an internal investigation. When the item has no significant monetary value and no evidentiary value, management should consider closing the record administratively to prevent the recurrence of the same item being identified as missing in a future inventory.

When an item is located on the shelf and cannot be linked to a particular case, the item should be photographed and listed on a “found property” report, held for the statutory period, and then disposed of according to existing laws.

Standard 15.2: Audits and Inspections

Standard: Comprehensive audits of the Property and Evidence function of an agency are a very important internal control that should be conducted at least annually by the Chief Executive Officer or designee. Additionally, there should be inspections of the property room conducted by the supervisor, or the unit commander, who are responsible for that component of the agency.

Definition: An audit is a review of the policies, procedures, and processes of the property and evidence functions of the agency to determine whether or not they meet the recognized standards, best practices, and are in compliance with applicable statutes and codes.

An inspection is a periodic review of designated aspects of the Property and Evidence Room function by its unit commander and/or supervisor(s). In addition to audits, agencies should conduct inspections. These inspections should be both formal, i.e. scheduled inspections as well as informal random inspections.

Inspections should cover such areas as: security, access control, tickler files, missing evidence, partial examination of records; general cleanliness and housekeeping of the area; inventory levels within the Property Room; safety practices; training of Property Officers; etc. In both cases any findings of the inspections should be documented in writing.

Reasoning: The audit is an important internal control that provides for early identification of problems or deficiencies in the system as well as confirming that

the property and evidence functions within the agency are free from significant errors or problems.

Policy should define when audits are to be conducted, by whom, and the scope of the audit.

The entire property and evidence function within the agency should be periodically audited to ensure:

- the integrity of the system and the individuals working in it,
- that departmental policies, directives, and procedural manuals are in compliance with the legal requirements and,
- that departmental personnel are complying with the agency's written policies and procedures.

Audit Components

COMPONENTS OF A COMPREHENSIVE SYSTEM AUDIT:

A. Policies and Procedures as they pertain to:

1. Staffing
2. Training
3. Purging- Disposition
4. Security
5. Compliance with statutory mandates, including OSHA
6. Special Handling – high profile items such as:
 - a. Firearms
 - b. Drugs
 - c. Money

B. Drugs

1. Found Property
2. Property for Safekeeping
3. Inventories
4. Audits

C. Packaging

1. Compliance with packaging manual/policy (if any)
2. Uniform size containers
3. Labeling
4. Protection of evidence, trace, bio, tool marks, etc
5. Right of refusal for improperly packaged items.

D. Facilities

1. Construction
2. Layout

3. Storage Schemes
4. Temporary storage
5. Long-Term Storage
6. High Profile Storage
 - a. Firearms
 - b. Money
 - c. Drugs

E. Documentation – (aka: “Paper Chase”), the methodology used for a complete inspection of selected property and evidence records in the following categories:

1. Open-Active Property Reports
2. Closed-Inactive Property Reports
 - a. Pending destruction
 - b. Disposed of
3. Chain of Custody- Movement
 - a. Out to crime lab
 - b. Out to case investigator
 - c. Out to court
 - d. Out to other agency
4. Computerized property records
 - a. drugs
 - b. money
 - c. firearms
5. Safety - Environmental

SUPERVISORY AUDIT - (AKA: SUPERVISORY INSPECTION)

In addition to comprehensive system audits, first line supervisors and/or managers should conduct periodic inspections of the property room. These inspections should include the following items that can be added based upon the particular needs of the individual agency:

1. Work Schedules – Work schedules should be adequate for the needs of the agency and public.
2. Public Hours for the Property Room – This refers to the days of the week and hours that the public has access to retrieve property.
3. Security of Property Room – This includes alarms, access control, testing of alarms, etc.
4. Disposal Procedures – This area of inspection should include, at a minimum, the procedures for the disposal of firearms, drugs, and bio-hazardous materials.

5. Tickler Files – All tickler files should be reviewed to determine if required actions have been completed within the agency’s time frames (as specified in department directives), e.g. evidence out to court, evidence out to the lab, release notice sent to legal owner, etc.
6. Authorization and Release of Property – Records should be reviewed to determine if officers/investigators are providing timely authorization for the release of property (This is dependent upon agency directives.) The documentation regarding the release of property to the legal owner should be checked to insure that department requirements have been complied with, e.g. copy of government issued photo ID, signature, etc.
7. Training - firearm safety, OSHA, Property and Evidence Management Class, computer software training
8. Safety – working conditions, workplace hazards, use of equipment, use of Personal Protective Equipment when necessary, etc:

INTERNAL AUDITS / EXTERNAL AUDITS

Internal Audits: When practical, an internal audit should be conducted by a person that does not have responsibilities within the property unit. An Inspections Unit, Internal Affairs Unit, or a Professional Standards Unit, etc. would be appropriate for the auditing procedure. The assignment of an impartial, third party, from another command avoids a possible accusation that the audit team had a vested interest in covering up any irregularities.

Audits by Outside Agencies/Private Auditors: The Chief Executive Officer may choose to periodically bring in auditors from other agencies or from a private auditing company to conduct a comprehensive audit. This approach helps to avoid internal politics and provides a level of independence that can sometimes be difficult to achieve in an Internal Audit. An external audit performed by non-employees of the agency avoids internal politics and provides a level of independence that cannot be obtained from any internal audit.

As an additional safeguard, unannounced inspections or random audits should be held at the discretion of the agency’s Chief Executive Officer. As noted above, both the unit supervisor and manager should periodically conduct inspections for adherence to policy, housekeeping and workload.

Conducting routine audits sends a message to everyone in the organization that property and evidence is important. Failure to conduct periodic audits may lead to problems that can later result in criminal prosecutions being lost, a loss of public confidence, personnel problems and possible financial loss.

Standard 15.3: Other Internal Controls

Standard: In addition to audits and inventories, internal controls consisting of tickler files, due diligence inquiries, reporting discrepancies, random sampling and qualitative testing of drugs for disposal, periodic management inspections should be implemented.

Definition:

- tickler files are computer file locations or physical folders where a notation or document is placed as a reminder of where an item was sent
- due diligence inquiries are periodic checks to ensure that an item is still where it was sent and is not ready to be returned yet.
- reporting discrepancies is needed whenever items are cannot be located where they are supposed to be, and cannot be readily found.
- random sampling is a means of checking a representative group for possible inconsistency within a margin of error for policy violations.
- qualitative testing of drugs for disposal is a means of checking for possible substitution in drug items that are scheduled for disposal.
- periodic management inspections are an informal form of internal audits that are designed to keep quality control consistent.

Reasoning: Management participation and oversight is critical to maintaining control over the property and evidence function. Without management oversight, there is no certainty that the unit is operating under the established parameters. The need for internal controls becomes very apparent when disposing of high profile items. What proof is there that the items that are claimed to be destroyed have actually been destroyed?

IAPE STANDARDS SECTION 16 – DIGITAL EVIDENCE

IAPE STANDARD SECTION 16.1 – DIGITAL EVIDENCE

Standard: Digital evidence is a critical element of modern criminal investigation that should be maintained in strict adherence to the basic principles of evidence management from acquisition through disposition, chain of custody, preservation, storage, security, and limited access.

Definition:

Digital evidence refers to digital information that has probative value in either tending to prove or disprove a material fact in a criminal or civil case.

Digital information is any type of electronic file containing text, data, signal, image, video, or voice recording stored on magnetic, optical, or flash media.

Reasoning: Digital evidence generally consists of digital information from many different sources. The range of what is considered digital evidence continues to expand at a rate that corresponds with the growth in technology. The following sources are commonly encountered:

audio data may come from these sources:

- pocket digital voice recorders
- cellular phone voice recorders
- in-car audio recorders
- victim provided telephone communications
- 911 call data
- court approved wiretaps
- message centers
- interrogation audio
- internet feed
- baby monitor feed
- parabolic antenna surveillance feed

still images may come from these sources:

- digital cameras
- cellular phones
- internet feed
- traffic cameras
- automated teller machines

moving video image may come from these sources:

- digital cameras
- cellular phones
- surveillance video
- security cameras
- body worn video
- in-car cameras
- interrogation video
- internet feed
- traffic cameras
- nanny cams

digital data may come from these sources:

- automobile computer data, aka “black box data”.
- fleet management monitoring
- GPS tracking location and speed data
- email
- letters, memos, reports, or other text files

Standard 16.2 Digital Evidence Preservation

Standard: Digital evidence should be preserved in a manner that retains the original content and format of the files, ensures the integrity of the digital information stored, and documents any changes to the files for the duration of its storage as evidence.

Definition: Digital evidence preservation refers to specific standardized procedures that are used to govern the acquisition, storage, backup, duplication, access, distribution, and final disposition of digital information with evidentiary value.

Reasoning: The appropriate handling and management of digital evidence ensures the integrity and availability of the digital information throughout the duration of its custody.

The original file should retain the authentic content and format of the source information. The digital information may require its translation or storage in a usable format and condition that is capable of retrieval for the duration of the required retention of the digital asset.

Digital information files preserved as evidence must retain the authentic content and format of the original file. That is not to say that only original assets may be preserved as evidence, nor should this be misconstrued to mean that assets transferred from a primary source (i.e. camera SD card) to permanent storage (i.e. optical media) are not authentic assets. Digital evidence assets must be verifiable as an authentic and true rendering of the originally submitted evidence.

One method of verifying the authenticity of a digital asset is through the generation of an MD5, SHA-2 or similar algorithm using an application designed for authenticating files or assets. This should only be performed by a high technology investigations expert.

Another critical component of preservation is simply the ability to retain and retrieve a required asset using the agency's digital management system. If a digital asset cannot be retained, or is retained but cannot be retrieved, the evidentiary value of the digital asset is non-existent. Any preservation or storage method employed by an agency must provide authorized users with the ability to access the information contained.

Consumer quality DVDs/CDs have not demonstrated that they are capable of reliably storing digital information for long-term under all storage conditions. Some DVDs/CDs may only preserve digital information for as little as five years if exposed to improper storage, such as heat, humidity, dust, or sunlight. It is critical to use media that is designed and intended for long-term storage.

Standard 16.3 Digital Evidence Security

Standard: Digital evidence should be stored in a secure environment, with appropriate safeguards to ensure the security of individual digital assets, storage locations and systems used to facilitate the management of digital evidence.

Definition: Digital evidence security is a systematic process designed to protect the digital file from unauthorized access, alteration or removal. Digital evidence security often involves a combination of traditional physical evidence security and computer security processes and systems to accomplish the task of securely storing digital evidence and keeping a paper or computerized trail, with signatures, of who had access to the item and when.

Reasoning:

Regardless of whether digital evidence is physically stored on electronic media inside the property room, or stored on network storage or a single computer workstation; digital evidence must be protected from unauthorized access, alteration or removal.

Maintaining the security of digital evidence is of paramount importance. Security measures should begin at the time the first employee comes into the possession of the digital information. This first employee, “Employee zero,” must make a determination on how best to preserve the original data. Is it possible to upload the data to a server, or should the entire device on which the recording was made be seized? Department policy, not an individual officer’s judgment should guide when to seize the original recording equipment, and when copying the data to a duplicate original will suffice.

Once the original digital information data has been preserved, it should be uploaded to a dedicated digital information server or copied to media capable of preserving the information for the duration of its custody.

A decision should be made to place the server where it can be secure, and where uninterrupted power is available. Once the server is located and functioning, policy should direct staff on how and when to fill requests for duplicate originals. Ideally, the assigned investigating officer, or the detail supervisor, should approve all requests for digital information before it is copied. All completed data requests should go back to the assigned investigating officer for delivery to the requesting party, as one point of contact.

Who should be responsible for the data? Some options are having the server located in IT, Records, or Evidence, depending on the size of the agency and the technical computer ability of the assigned staff. Assigning the digital information server to Evidence is preferable, unless the evidence custodian(s) have limited computer skills. Placing the server in IT or Records is not discouraged if the staff

is appropriately trained in chain of evidence issues and documentation of requests for copies made, and orders filled.

Security of original digital evidence data is maintained by:

- limiting access to files to only authorized persons
- ensuring that original image files never leaves the server or storage facility unless the item is formally released from custody or disposed following departmental policy
- running software that detects changes to content
- making automatic uploads of body camera data without user input.
- having in-car camera data uploaded by automatic activation, not selectively downloaded by operator input to eliminate claims of user tampering.
- having the main server backed up to cloud storage, or other third party (off-site) storage to guarantee access to the court and transparency on a daily basis
- ensuring that the original files are only accessed in a read only format and duplicate originals preserved to guarantee access and transparency; no “lost” or “misplaced” files

Standard 16.4 Digital Evidence Infrastructure

Standard: Agencies utilizing digital evidence should maintain the technological capacity to appropriately manage and store digital evidence, and adopt measures to accommodate future demands in digital evidence technology.

Definition: Digital evidence infrastructure refers to physical storage of digital evidence; as well as any software, storage media, hardware and network or cloud storage used to acquire, manage or store digital evidence.

Reasoning: Digital evidence management practices should be supported by the department’s information technology infrastructure to ensure compatibility between digital evidence storage and existing and future information technology systems. Planning and decision making for digital evidence management processes and systems should account for future technology needs.

Digital evidence practices should support requirements and processes for the forensic analysis of digital evidence.

Departments should ensure that digital evidence management systems provide a clearly defined set of procedures and utilize a user interface that makes the process convenient and understandable to the end user. For example, providing a link to “read only” copies of all digital evidence in a case could simplify discovery and increase security. Numbered copies of photos could be provided under subpoena, and also identify where unauthorized copies, if any, may originate.

Digital images come in a variety of formats, some are common and some are proprietary. There is a need to convert one master copy to a common user-friendly format in order to store and duplicate the images on the department's designated digital evidence server. The original data (tape, flash memory drive, or optical storage in user-unfriendly format) should be booked into evidence as an archive copy, if needed. Law enforcement agencies should be prepared to store images in different common formats, or convert a duplicate original to a user-friendly format master copy.

Proprietary formats used for un-coding surveillance cameras in stores or from ATMs can create a critical need. It is always useful to know what the forensic digital capabilities of the local, county, or state crime labs are before seeking commercial assistance.

Agencies should have equipment available to copy and upload digital information from many different sources when the need arises. Digital data comes from many sources and should be uploaded to the designated digital evidence server to properly manage its distribution.
